Section 1

Introduction

Introduction:

The Florida Department of Transportation District 5 (FDOT D5) is in the process of updating the Regional ITS Architecture (RITSA). This update will include the involvement of the Metro and Transportation Planning Organizations (MPO/TPO). The FDOT D5 recognizes the need to update and maintain the existing architecture which will provide context for ITS projects so that each project supports the envisioned transportation system goals and conforms to the National ITS Architecture. By using the architecture as a planning tool, each ITS project will be incorporate transportation system management and operations strategies to assist in fulfilling the larger objectives set forth in the long range transportation plan.

This Regional ITS Architecture Update Workbook and Reference Guide has been developed to assist FDOT and the MPO/TPO's through this process.

How to use this Workbook:

This workbook is intended to provide a systematic step-by-step approach to updating the existing RITSA and provide updates regarding future projects that will alter the RITSA. Workbooks are specific to each MPO or TPO area of responsibilities. For example, in the Space Coast TPO Workbook, there will be worksheets for Brevard County, City of Melbourne, City of Palm Bay, etc. Some worksheets may contain information regarding another MPO, however, each MPO should only focus on making changes to the elements within their area of responsibility.

This Workbook contains several worksheets divided into 7 sections:

Context Diagram – a logical diagram of data flows between ITS elements. These data flows may currently exist or may be planned for the future. Diagrams will be provided for all inventory/elements within the MPO/TPO area of responsibility.

Existing Data Flow Connections – depicts the data flows that are shown in the existing RITSA. These data flows need to be updated to reflect true and real conditions as they exist today.

ITS Stakeholders – a list of agencies (i.e. state, municipal, multimodal, private, etc.) that contribute to or have a vested interest in the regional transportation network

ITS Elements – inventory (e.g. Traffic Management Centers, Emissions Control Center, Emergency Operations Center, etc.) belonging to an ITS stakeholder

ITS Element Requirements – contractual obligations that must be fulfilled or expectations that must be met by the ITS Elements.

Stakeholders Roles and Responsibilities – contractual obligations that must be fulfilled or expectations that must be met by the ITS Stakeholders and the role each plays in regards to one another.

Project Planning – a worksheet design assist agencies with listing projects that are currently in the Transportation Improvement Plan along with their goals, objectives and benefits to the transportation network.

RITSA Update Instructions:

RITSA Update Process: *(Stakeholders are to complete all necessary worksheets as described below)*

1. Update the existing RITSA
2. Update the existing data flows
3. Update the existing Stakeholders and Elements List
4. Update the existing Elements Requirements (Equipment Packages)
5. Update the existing Stakeholders Role and Responsibilities (Operational Concepts)
6. Add new projects to the RITSA

Updating the Existing Diagram:

1. Only update the existing RITSA diagram for the elements (i.e. Brevard Co. TMC and Brevard Co. Field Equipment) that your organization (i.e. Brevard County) is responsible for.
2. Please use and mark changes on the “Context Diagram Worksheets” provided in the RITSA Update Workbook.
3. Denote each data flow as either existing or planned on each diagram provided. (See example provided in Exhibit A.1)
4. Determine if the stakeholders and elements shown in the diagram are correct. Make changes as necessary. Add stakeholders and/or elements if missing by drawing the stakeholder and element box in RED ink. (See example provided in Exhibit A.1)

Update the Existing Data Flows:

1. On the “Existing Data Flow Connections” worksheet within the RITSA Update Workbook, please review the existing data flows and determine if the flows and elements are true and accurate.
2. If correct, leave as is. If incorrect, make all corrections directly on the worksheet in RED ink by crossing out the incorrect information and providing the correct data below or adjacent to it. Also, provide explanation in the comment box when necessary. (See example provided in Exhibit A.2)
3. Descriptions of the Flow Names are listed in the “Architecture Flows Description” section of the RITSA Update Reference Guide.

Update the Existing Stakeholders and Elements (Inventory) List:

1. Please review the “Stakeholders” section of the RITSA Update Reference Guide to ensure all stakeholders associated with your organization are included.
2. If you find that there are any stakeholders that currently have existing data flows with your organization, that are not listed in the stakeholders list, please add the stakeholders to the bottom of the “ITS Stakeholders” worksheet in the RITSA Update Workbook and provide a brief description of the stakeholder.
3. Please review the “Inventory (Elements) by Stakeholders” section of the RITSA Update Reference Guide to ensure all ITS Elements associated with your organization are included.
4. If you find any elements that your organization that are not listed in the “Inventory by Stakeholders” section of the RITSA Update Reference Guide, please add the elements to the bottom of the “ITS Elements” worksheet in the RITSA Update Workbook and provide a brief description of the element.

Update the Existing Element Requirements (Equipment Packages):

1. Please review and update the “ITS Element Requirements” worksheet in the RITSA Update Workbook.
2. The functional area description column represents the requirements for each element within your organization. For each requirement update the status as Planned, Existing, Planned/Existing or Not Planned.
3. A high level description of each functional area can be found in the “Equipment Packages Description” section of the RITSA Update Reference Guide.

Update the Existing Stakeholder Responsibilities (Operational Concepts):

1. Please review and update the “Stakeholders Role and Responsibilities” worksheet in the RITSA Update Workbook.
2. The “RR Description” column represents the responsibilities of your organization. For each RR Description update the status as Planned, Existing or Not Planned.

Planning for future Projects:

1. Please complete the “Project Planning” worksheet by following the instructions written for each question contained in the worksheet and using the RITSA Update Reference Guide as a cross-reference.

Planned – Will be established in the future.

Existing – Currently established

Planned/Existing – Some items are currently established while other portions will be established in the future

Not Planned – not established and has no future plans to establish

Submittal Process:

This workbook is to be completed by the Stakeholders and submitted to the FDOT ITS Traffic Engineer who will use the completed workbook to update the RITSA database and submit it to FDOT Central Office and FHWA.

You may either print this workbook or make changes directly on the printed sheets or edit the digital copy of the worksheets. If you selected to print the worksheets in the workbook, please scan all necessary worksheets and email to the FDOT ITS Traffic Engineer with the subject line titled “RITSA Update Workbook (Stakeholder Name)”. If completed digitally, please save a copy and follow the same email procedures.

Additional Information:

All information within this workbook regarding the existing Regional ITS Architecture has been provided by the FDOT Statewide ITS Architecture website:

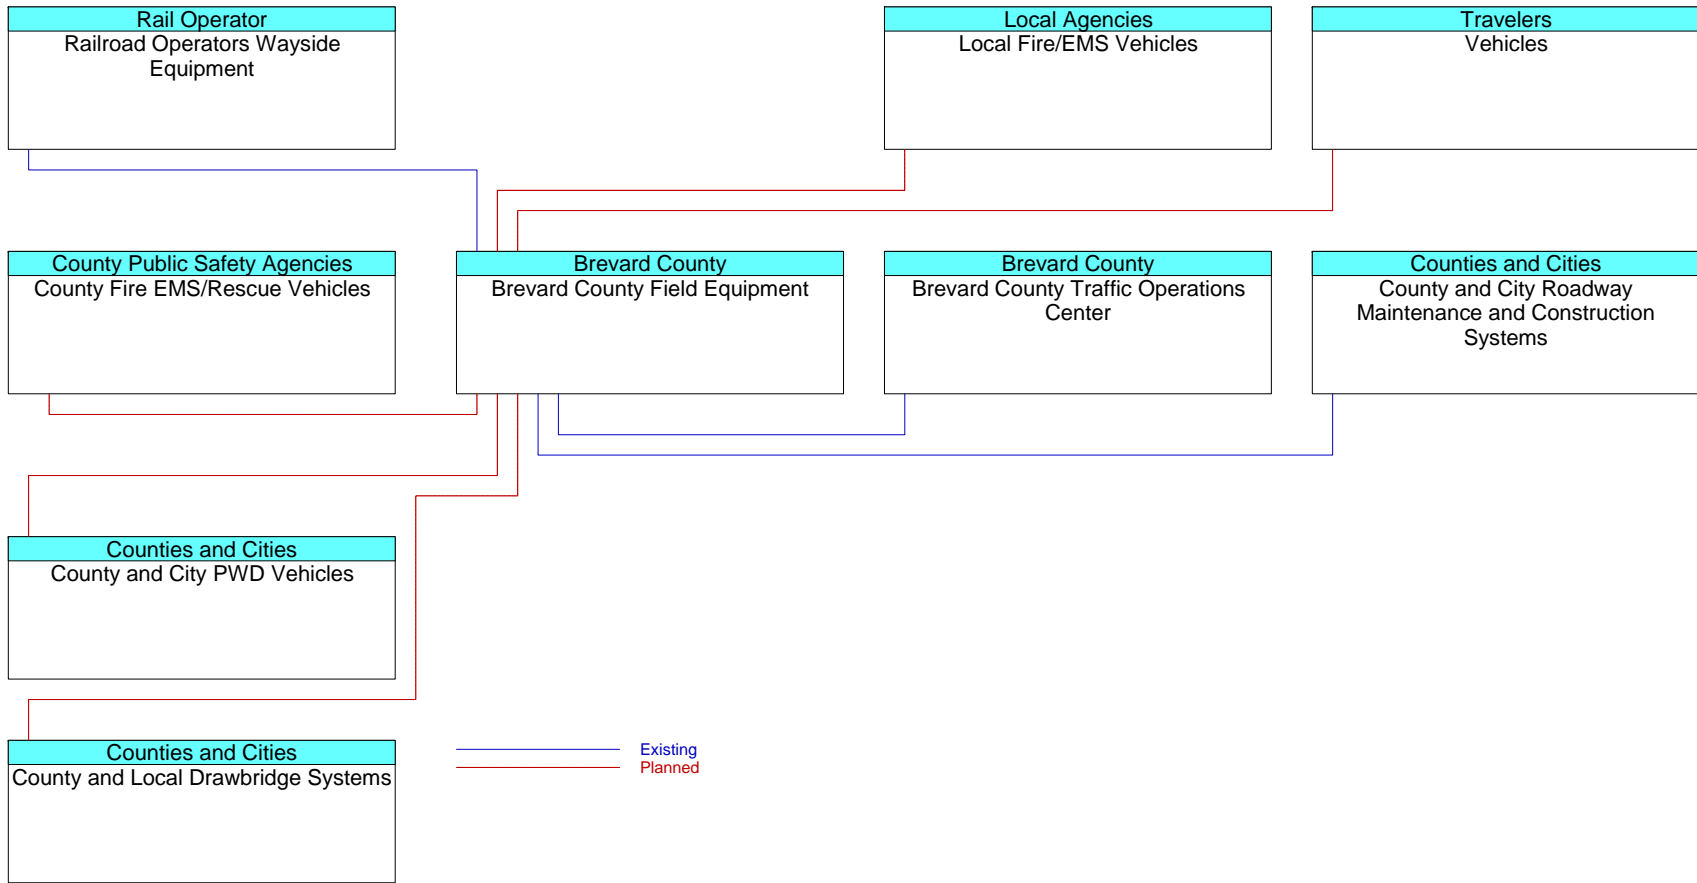

<http://www.consystem.com/florida/> and <http://www.iteris.com/itsarch/html/menu/hypertext.htm>.

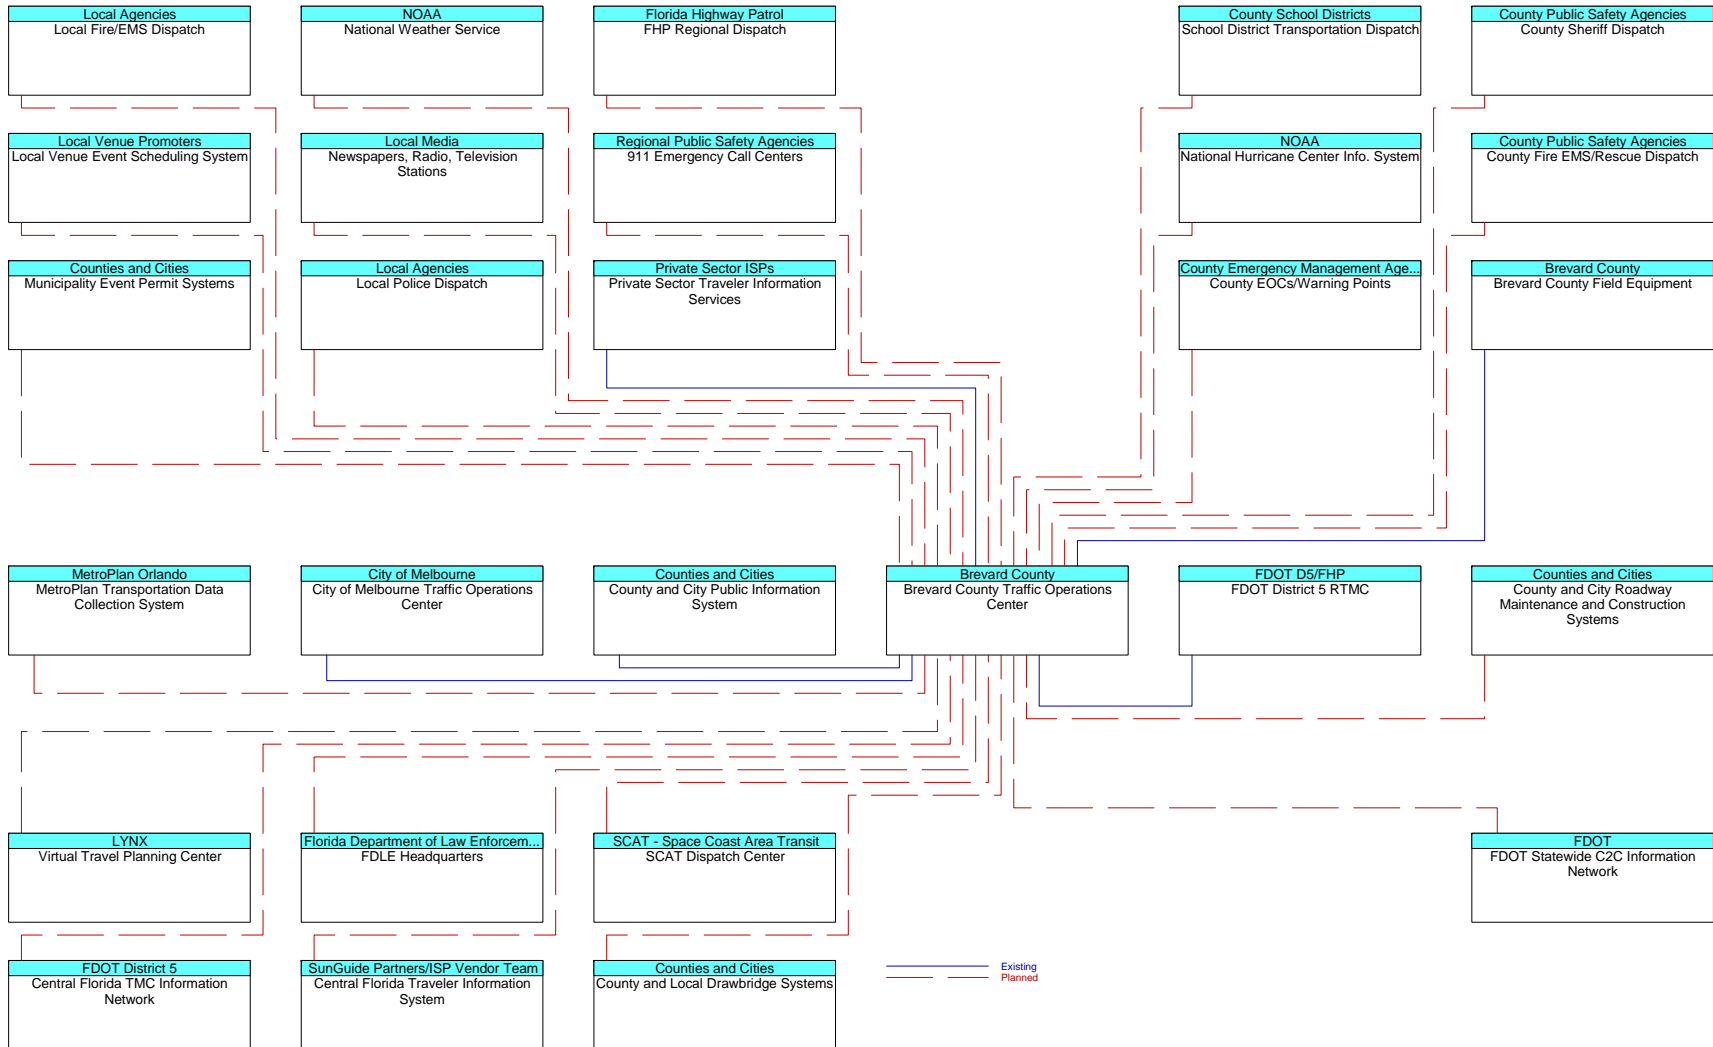

Additionally, free web-based training modules on ITS Architecture is available at the site below:

<http://www.iteris.com/itsarch/html/training/useandmainttraining.htm>

ITS Stakeholders Worksheet

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

ITS Stakeholders

Stakeholder Name	Stakeholder Description	Group	Group Members
Airport Authorities	Represents regional airport authorities and agencies responsible for operating and maintaining regional airports.	No	
Amtrak	Nationwide passenger rail organization with service throughout the United States.	No	
Archived Data Users	Users of archived data.	No	
Brevard County	Represent the agencies and departments of Brevard County.	No	
Canaveral Port Authority	Represents the agency responsible for the operation of Port Canaveral.	No	
CHEMTREC	CHEMTREC (CHEMical TRansportation Emergency Center) was established by the chemical industry as a public service hotline for fire fighters, law enforcement, and other emergency responders to obtain information and assistance for emergency incidents involving chemicals and hazardous materials.	No	
City of Daytona Beach	Represents the municipal agencies and departments of the City of Daytona Beach.	No	
City of Maitland	Represents the municipal agencies and departments of the City of Maitland.	No	
City of Melbourne	Represents the municipal agencies and departments of the City of Melbourne.	No	
City of Melbourne Airport Authority	Represents the city agency responsible for operating and maintaining Melbourne airport.	No	
City of Ocala	Represents the municipal agencies and departments of the City of Ocala.	No	
City of Orlando	Represents the municipal agencies and departments of the City of Orlando.	No	
City of Winter Park	Represents the municipal agencies and departments of the City of Winter Park.	No	
Counties and Cities	Represents generic county and municipal agencies and departments, including public works departments, and permit offices.	No	
County and City Traffic Engineering	Represents the generic county and local traffic management agencies.	No	
County Emergency Management Agencies	Represents the generic county agencies and departments that coordinates emergency response during major disasters or incidents.	No	
County Public Safety Agencies	Represents the generic county public safety agencies, including EMS, fire departments, and sheriff's departments.	Yes	County Public Safety Agencies - Fire/EMS

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder Name	Stakeholder Description	Group	Group Members
County Public Safety Agencies	Represents the generic county public safety agencies, including EMS, fire departments, and sheriff's departments.	Yes	County Public Safety Agencies - Sheriffs Department
County School Districts	Represents the public school districts in Florida.	No	
Disney/Reedy Creek Improvement District	Reedy Creek Improvement District is a public corporation of the State of Florida and is located in Orange and Osceola Counties in central Florida, about 15 miles southwest of the City of Orlando. The District currently encompasses approximately 25,000 acres. The district is home to Disney World.	No	
FDOT	Florida Department of Transportation (FDOT). The mission of the department is to provide a safe and reliable transportation system that ensures the mobility of people and goods, enhances economic prosperity and preserves the quality of Florida's environment and communities. Various modes of transportation are supported by the department including roadways, railways, seaport and airports.	No	
FDOT Central Office of Information Services	The Office of Information Systems (OIS) is a division level organization within the Department of Transportation. The Chief Information Officer serves as the director of OIS. The primary functions of the OIS are to provide FDOT with a functional, statewide information processing and communications network, provide technical support for the Department's integrated office automation systems; provide staff controls for all statutory requirements of information resources in the area of procurement, security and finance; and manage all computer-based administrative and managerial data processing information. It is the mission of the Office of Information Systems to meet the requirements of customers who use computer-generated information by providing and supporting technology, systems, and services that are reliable, available, and protected.	No	
FDOT Central Planning Office	The central office for statewide transportation planning for FDOT.	No	
FDOT Central Planning Transportation Statistics Office	Florida Department of Transportation's central clearinghouse and principal source for highway and traffic data.	No	
FDOT Commission for the Transportation Disadvantaged	State of Florida Commission for the Transportation Disadvantaged (CTD). An independent commission housed administratively within the Florida Department of Transportation whose mission is to insure the availability of efficient, cost-effective, and quality transportation services for transportation disadvantaged persons.	No	
FDOT D5/FHP	A stakeholder group consisting of FDOT District 5 and FHP. Created for elements that are jointly operated by FDOT District 5 and FHP.	Yes	FDOT District 5
FDOT D5/FHP	A stakeholder group consisting of FDOT District 5 and FHP. Created for elements that are jointly operated by FDOT District 5 and FHP.	Yes	Florida Highway Patrol

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder Name	Stakeholder Description	Group	Group Members
FDOT District 5	Represents Florida Department of Transportation District 5, Central Florida, which includes the following counties: Brevard, Flagler, Lake, Marion, Orange, Osceola, Seminole, Sumter, and Volusia.	No	
FDOT Turnpike Enterprise	Represents Florida Department of Transportation Turnpike Enterprise Division, which manages and operates limited-access toll highways in the State of Florida, including the Florida Turnpike.	No	
FDOT/LYNX	A stakeholder group composed of FDOT District 5 and LYNX Transit.	Yes	FDOT District 5
FDOT/LYNX	A stakeholder group composed of FDOT District 5 and LYNX Transit.	Yes	LYNX
Financial Institutions	Financial and banking institutions that play a role in electronic payment financial transactions.	No	
Florida Department of Highway Safety and Motor Vehicles	The Florida Department of Highway Safety and Motor Vehicles promotes a safe driving environment through law enforcement, public education and service, reduction of traffic crashes, titling and registering of motor vehicles and vessels, licensing motor vehicle operators, and regulation of motor vehicle exhaust.	No	
Florida Department of Law Enforcement	Florida Department responsible for initiating Amber Alert messages.	No	
Florida Division of Emergency Management	A division of the Florida Department of Community Affairs, the Florida Division of Emergency Management is responsible for ensuring that the State of Florida is prepared to respond to emergencies, recover from them, and mitigate their impacts.	No	
Florida Highway Patrol	The Florida Highway Patrol's (FHP) mission is to promote a safe driving environment through aggressive law enforcement, public education, and safety awareness; reduce the number and severity of traffic crashes in Florida, preserve and protect human life and property.	No	
Greater Orlando Airport Authority	Represents airport authority responsible for operating and maintaining Orlando International airport	No	
Lake County	Represent the agencies and departments of Lake County.	No	
Local Agencies	Represents local government agencies and departments, including local fire/rescue departments, law enforcement providers, and emergency management agencies.	Yes	Local Agencies - Fire EMS/Rescue Departments
Local Agencies	Represents local government agencies and departments, including local fire/rescue departments, law enforcement providers, and emergency management agencies.	Yes	Local Agencies - Police Departments
Local Media	Owner/operators of communications media including television, cable TV, radio, and news papers.	No	
Local Transit Operators	Represents generic public transit operators, agencies, and their systems.	No	

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder Name	Stakeholder Description	Group	Group Members
Local Venue Promoters	Local event promoters, such as arenas.	No	
LYNX	LYNX is the primary transit system of the region operated by the Central Florida Regional Transportation Authority	No	
Manatee County Transportation Department	The Manatee County division responsible for traffic services in the county.	No	
Marion County Government	Represents the agencies and departments of Marion County	No	
MetroPlan Orlando	The Metropolitan Planning Organization (MPO) for the Orlando region.	No	
NASA/Private Companies	National Aeronautics and Space Administration	No	
NOAA	National Oceanic and Atmospheric Administration. Includes the National Weather Service and the National Hurricane Center.	No	
Orange County	Represents the agencies and departments of Orange County.	No	
Orange County/OCCC	Orange County Convention Center (OCCC) is owned and operated by Orange County and is the largest convention center in District 5.	No	
Orlando/Orange County Expressway Authority	The Orlando-Orange County Expressway Authority operates toll roads in Orange County and in adjacent counties if requested by local government.	No	
Osceola County Engineering	Represents the traffic and engineering departments of the Osceola County.	No	
Osceola County Expressway Authority	Planned new Expressway Authority for Osceola County.	No	
Parking Facility Operators	Operators of public or private parking facilities, including park-and-ride facilities. May include bus shuttle services provided by private park-and-ride facilities.	No	
Polk County Transit Services	Polk County Transit Services provide paratransit services for the county.	No	
Private Bus Companies	Represents private companies providing fixed route or paratransit services in the region.	No	
Private Commercial Vehicle and Fleet Operators	Owner/operators of private commercial vehicles and fleets.	No	

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder Name	Stakeholder Description	Group	Group Members
Private Concierge Service Provider	Private concierge service providers within the region. Includes Onstar, etc.	No	
Private Maintenance Contractors	Represents private companies hired by the public sector to provide roadway maintenance, ITS equipment maintenance or vehicle maintenance.	No	
Private Sector ISPs	Private traveler and transportation information service providers, including Mobility Technologies, SmartRoute Systems, Shadow Traffic, and Metro Traffic.	No	
Private Transit Operators	Owner/operators of bus services, including private long-distance bus service, private shuttle services, and demand-responsive bus services	No	
Private Weather Information Providers	Private companies providing weather services and information.	No	
Private/Public Regional Medical Centers	Hospital/trauma centers in the region.	No	
Probe Information Providers	Providers of probe information. These providers can provide wide area probe data information based on the location of cell phones, automated vehicle locators, and other technologies.	No	
Rail Operator	Generic owner/operator of commercial or passenger rail service. Includes CSXNS and FEC.	No	
Regional Public Safety Agencies	Represents the generic county and municipal public safety agencies, including EMS, fire departments, police departments, and sheriff's departments. Also represents the agencies that manage and operate PSAPs (Public Safety Answering Points).	No	
Regional Transit Management Agencies	Generic element representing transit management agencies and operators in the State of Florida.	No	
SCAT - Space Coast Area Transit	Transit provider in Brevard County	No	
Seminole County	Represents the agencies and departments of Seminole County.	No	
St. Lucie County Transit	Public transit provider for St. Lucie County. Includes a fixed route service (Treasure Coast Connector, which services St. Lucie County, Martin County, and Fort Pierce), and Community Transit, which is a demand-responsive bus service serving Fort Pierce and Port St. Lucie. Its website is at http://www.coasl.com/svc_transportation.html .	No	
SunGuide Partners/ISP Vendor Team	Represents the public agencies and private partners that operate and manage the regional 511 systems.	No	

Section 5

ITS Elements Worksheet

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Inventory – ITS Elements

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Airport Authorities	Air Freight Terminals	Represents regional air freight terminals.	Existing	Normal	Intermodal Freight Depot		
Amtrak	Amtrak Passenger Train Terminal	Amtrak passenger train terminals located in the State of Florida.	Existing	Normal	Multimodal Transportation Service Provider		
Archived Data Users	Archived Data User Systems	Users of archived data.	Existing	Normal	Archived Data User Systems		
Brevard County	Brevard County Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by Brevard County that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
Brevard County	Brevard County Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for Brevard County.	Existing	Normal	Traffic Management		
Canaveral Port Authority	Port Canaveral	Marine terminals located in District 5.	Existing	Normal	Intermodal Freight Depot		
Canaveral Port Authority	Port Canaveral	Marine terminals located in District 5.	Existing	Normal	Multimodal Transportation Service Provider		
CHEMTREC	CHEMTREC	CHEMTREC (CHEMical TRansportation Emergency Center) was established by the chemical industry as a public service hotline for fire fighters, law enforcement, and other emergency responders to obtain information and assistance for emergency incidents involving chemicals and hazardous materials.	Existing	Normal	Fleet and Freight Management		
City of Daytona Beach	City of Daytona Beach Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by the City of Daytona Beach that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
City of Daytona Beach	City of Daytona Beach Traffic Management Center	This staffed operational center controls traffic signals and other associated traffic management devices for Daytona Beach.	Existing	Normal	Traffic Management		
City of Maitland	City of Maitland Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by the City of Maitland that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
City of Maitland	City of Maitland Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for the city of Maitland.	Existing	Normal	Traffic Management		
City of Melbourne	City of Melbourne Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by City of Melbourne that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
City of Melbourne	City of Melbourne Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for the city of Melbourne.	Existing	Normal	Emissions Management		
City of Melbourne	City of Melbourne Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for the city of Melbourne.	Existing	Normal	Traffic Management		
City of Melbourne Airport Authority	Melbourne International Airport	This international airport serves the city of Melbourne and Brevard County.	Existing	Normal	Multimodal Transportation Service Provider		
City of Ocala	City of Ocala Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by the City of Ocala that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
City of Ocala	City of Ocala Traffic Management Center	This staffed operational center controls traffic signals and other associated traffic management devices for the City of Ocala.	Existing	Normal	Traffic Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
City of Orlando	City of Orlando Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, CCTV, traffic control devices, and driver information systems) operated by the City of Orlando that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
City of Orlando	City of Orlando Traffic Management Center	This staffed operational center controls traffic signals and other associated traffic management devices for the City of Orlando.	Existing	Normal	Traffic Management		
City of Winter Park	City of Winter Park Field Equipment	Represents the ITS field equipment operated by City of Winter Park, such as traffic controllers, detectors, traffic control devices, and driver information systems that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
City of Winter Park	City of Winter Park Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for the city of Winter Park.	Existing	Normal	Traffic Management		
Counties and Cities	County and City Public Information System	Generic element representing the public information office systems that are operated by county and local governments. They provide information on road closures and other important traveler information in the region.	Existing	Normal	Information Service Provider		
Counties and Cities	County and City Public Information System	Generic element representing the public information office systems that are operated by county and local governments. They provide information on road closures and other important traveler information in the region.	Existing	Normal	Maintenance and Construction Management		
Counties and Cities	County and City PWD Vehicles	Generic element representing the ITS-devices (i.e., mobile data terminals) onboard the maintenance vehicles operated by county or city maintenance organizations.	Existing	Normal	Maintenance and Construction Vehicle		
Counties and Cities	County and City Roadway Maintenance and Construction Systems	Generic element representing the road maintenance and construction systems operating in the region. This includes local, municipal and county maintenance departments.	Existing	Normal	Maintenance and Construction Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Counties and Cities	County and Local Asset Management Systems	This element represents asset management databases or systems operated by county or municipal agencies.	Planned	Normal	Asset Management		
Counties and Cities	County and Local Drawbridge Systems	Miami-based US Coast Guard determines schedule for bridge openings and closings based on marine traffic and weather conditions. Marine traffic receives information from the Coast Guard on bridge schedules. Bridge tenders working for the county and local agencies actually control the raising and lowering of the bridges. Transponders that provide bridge status information (none currently implemented) would provide this information directly to the county and local operating agencies.	Existing	Normal	Multimodal Crossings		
Counties and Cities	County and Local Equipment Repair Facility	This facility provides repair and maintenance services for county, local and municipal maintenance vehicles and equipment (e.g. portable DMS).	Existing	Normal	Equipment Repair Facility		
Counties and Cities	Local Transportation Data Collection Systems	These systems collect traffic data, land use data, crash data (includes both short and long form inputs in some counties), and inventory data for localities, such as cities, counties, MPOs, or regional planning councils.	Planned	Normal	Archived Data Management Subsystem		
Counties and Cities	Municipality Event Permit Systems	This generic element represents the special permit offices and associated systems that provide permits for large public gatherings and special events in the region.	Existing	Normal	Event Promoters		
Counties and Cities	Other County and City Maintenance	Represents the maintenance systems and maintenance dispatch for other counties. This element is used to define the interface from the region's public works departments to those in other districts.	Existing	Normal	Maintenance and Construction Management		
Counties and Cities	Other County and City Maintenance	Represents the maintenance systems and maintenance dispatch for other counties. This element is used to define the interface from the region's public works departments to those in other districts.	Existing	Normal	Other MCM		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
County and City Traffic Engineering	County and Local Field Equipment	Generic element representing smaller county and local ITS roadside field equipment not specifically enumerated in other inventory elements. This suggests that these traffic signal systems that are widely scattered through the district should be integrated in a consistent fashion, when circumstances require. ITS field equipment may include traffic signals, vehicle detectors, CCTV cameras, dynamic message signs, etc., to control and monitor traffic.	Planned	Normal	Roadway Subsystem		
County and City Traffic Engineering	County and Local Traffic Control Systems	Generic element representing county and municipal traffic signal control systems. These systems control traffic signals and manage other ITS traffic management devices, such as dynamic message signs, and CCTV cameras.	Existing	Normal	Traffic Management		
County Emergency Management Agencies	County Emergency Broadcast Systems	Generic element representing information systems used to disseminate emergency information, including evacuation routes. Such systems may include sirens, telephone numbers and web sites.	Existing	Normal	Information Service Provider		
County Emergency Management Agencies	County EOCs/Warning Points	Generic element representing county emergency operation centers (EOCs). The county EOC provides a coordinating point for the effective management of local emergencies to catastrophic events in and around the county. It is the lead organization in coordinating disaster response from a municipal level to state and federal. Recovery planning and financial assistance from the State of Florida and FEMA are established through the EOC.	Existing	Normal	Emergency Management		
County Public Safety Agencies	County Fire EMS/Rescue Dispatch	Generic element representing county fire and rescue dispatch centers. In some counties, this may include dispatching volunteer departments and EMS. The dispatch center provides call taking, communications, and dispatch functions. Note that there are multiple fire districts in some counties. In these cases, there is an overall county-wide dispatch operation that dispatches ambulances and other assets and independent dispatch operations for each of the other districts in the county.	Existing	Normal	Emergency Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
County Public Safety Agencies	County Fire EMS/Rescue Vehicles	Generic element representing the ITS-devices (i.e., mobile data terminals) onboard county fire trucks, fire apparatus, and other rescue vehicles.	Existing	Normal	Emergency Vehicle Subsystem		
County Public Safety Agencies	County Sheriff Dispatch	Generic element representing the county sheriff dispatch center. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Emergency Management		
County Public Safety Agencies	County Sheriff Dispatch	Generic element representing the county sheriff dispatch center. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Enforcement Agency		
County Public Safety Agencies	County Sheriffs Vehicles	Generic element representing the ITS-devices (i.e., mobile data terminals) onboard county sheriff vehicles.	Existing	Normal	Emergency Vehicle Subsystem		
County School Districts	School Buses	Represents the ITS equipment installed on school buses servicing Florida. General ITS capabilities are included here, omitting fare management capabilities, but with increased emphasis on the positive identification of students on the buses.	Existing	Normal	Transit Vehicle Subsystem		
County School Districts	School District Transportation Dispatch	Represents the dispatch systems that manage school bus fleets. General ITS capabilities are included here, omitting fare management capabilities, but with increased emphasis on vehicle location and status tracking, associated security and safety systems, and the positive identification of students on the buses.	Existing	Normal	Emergency Management		
County School Districts	School District Transportation Dispatch	Represents the dispatch systems that manage school bus fleets. General ITS capabilities are included here, omitting fare management capabilities, but with increased emphasis on vehicle location and status tracking, associated security and safety systems, and the positive identification of students on the buses.	Existing	Normal	Transit Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
County School Districts	School District Transportation Web Site	Web pages containing school bus information, including routes and schedules. In the future, may include real-time bus locations, status, and other school district transportation system status to parents, students, and school district employees	Existing	Normal	Information Service Provider		
Disney/Reedy Creek Improvement District	Disney Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by Disney on the Disney World property.	Existing	Normal	Roadway Subsystem		
Disney/Reedy Creek Improvement District	Disney Traffic Operations Center	The traffic operations center that manages traffic on the Disney World property.	Existing	Normal	Traffic Management		
FDOT	FDOT 511 System	This element represents the statewide aspects of the 511 system.	Planned	Normal	Telecommunications System for Traveler Information		
FDOT	FDOT Asset Management Systems	Database systems used by FDOT to perform asset management.	Existing	Normal	Asset Management		
FDOT	FDOT Statewide C2C Information Network	Represents a planned system to interface all the FDOT District Traffic Management Centers, and various other county- and locally operated traffic operations center. This information network will allow these centers to share traffic information, such as operational data and traffic images.	Planned	Normal	Other Traffic Management		
FDOT	FDOT Statewide Transportation EOC (TEOC)	FDOT's Statewide Emergency Operations Center located in Tallahassee, which is staffed only during emergencies by representatives of all allied responding agencies.	Existing	Normal	Emergency Management		
FDOT	Other FDOT District Infrastructure Monitoring Equipment	Infrastructure monitoring equipment including IR, cameras and motion detectors. These sensors and detectors are operated by other FDOT Districts to monitor and protect FDOT infrastructure and facilities, not for traffic monitoring, but allows other FDOT traffic management centers to view their data.	Existing	Normal	Security Monitoring Subsystem		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
FDOT	Other FDOT District Maintenance and Construction	Represents the maintenance systems and maintenance dispatch for other FDOT Districts. This element is used to define the interface from the region's FDOT Maintenance and Construction functions to those in other districts.	Existing	Normal	Maintenance and Construction Management		
FDOT	Other FDOT District TMCs	Represents FDOT TMCs in other districts. This element is used to define the interface from the region's FDOT TMC to those in other districts.	Existing	Normal	Other Traffic Management		
FDOT	Other FDOT District TMCs	Represents FDOT TMCs in other districts. This element is used to define the interface from the region's FDOT TMC to those in other districts.	Existing	Normal	Traffic Management		
FDOT	Regional ITS Data Warehouse	The Regional ITS Data Warehouse will collect and archive traffic operational data for the district/region. There is a separate regional data warehouse for each FDOT district/region. This data warehouse could be a virtual data warehouse.	Planned	Normal	Archived Data Management Subsystem		
FDOT	Rest Areas/Visitor Centers/Service Plazas	Rest areas and visitor centers with varied amenities owned, operated or managed by FDOT. Tourist information, emergency evacuation information, and general traffic information could be provided in the future.	Existing	Normal	Remote Traveler Support		
FDOT Central Office of Information Services	FDOT Safety and Crash Data Collection System	This FDOT database stores crash reports and other safety-related transportation data.	Existing	Normal	Archived Data Management Subsystem		
FDOT Central Office of Information Services	FDOT Statewide OIS Enterprise Databases	Operated and maintained by the FDOT Office of Information System, this is a statewide database that includes bridge inventory, roadway character inventory system, and pavement management systems.	Existing	Normal	Archived Data Management Subsystem		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
FDOT Central Planning Office	FDOT Traffic Count Stations	Traffic data collection systems deployed by FDOT to collect long term traffic data. The data collected by these telemetry stations includes vehicle weight and vehicle classification in addition to vehicle counts, speeds, and other standard traffic MOEs.	Existing	Normal	Roadway Subsystem		
FDOT Central Planning Transportation Statistics Office	FDOT Traffic Characteristics Inventory	This statewide database collects long term traffic data for state roads in Florida. It collects this data from a number of traffic data collection sites around the state, including both temporary and permanent data collection sites.	Existing	Normal	Archived Data Management Subsystem		
FDOT Commission for the Transportation Disadvantaged	Florida Human Service Agencies	Represents the various social service agencies operated by the State of Florida. Included in the ITS architecture because they provide (para) transit voucher payments through the Florida Transportation Disadvantage Commission.	Existing	Normal	Information Service Provider		
FDOT Commission for the Transportation Disadvantaged	Florida Human Service Agencies	Represents the various social service agencies operated by the State of Florida. Included in the ITS architecture because they provide (para) transit voucher payments through the Florida Transportation Disadvantage Commission.	Existing	Normal	Social Services Agencies		
FDOT D5/FHP	FDOT District 5 RTMC	The regional traffic management center that manages major roadways for Florida DOT in District 5 and interstates around Florida that are not monitored by other systems. This staffed center provides key traffic monitoring and motorist information systems for roadways (and bridges) in District 5 and around the state. It provides incident management for both planned (e.g. major sporting events) and unplanned incidents (e.g. major weather events)	Existing	Normal	Emergency Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
FDOT D5/FHP	FDOT District 5 RTMC	The regional traffic management center that manages major roadways for Florida DOT in District 5 and interstates around Florida that are not monitored by other systems. This staffed center provides key traffic monitoring and motorist information systems for roadways (and bridges) in District 5 and around the state. It provides incident management for both planned (e.g. major sporting events) and unplanned incidents (e.g. major weather events)	Existing	Normal	Other Traffic Management		
FDOT D5/FHP	FDOT District 5 RTMC	The regional traffic management center that manages major roadways for Florida DOT in District 5 and interstates around Florida that are not monitored by other systems. This staffed center provides key traffic monitoring and motorist information systems for roadways (and bridges) in District 5 and around the state. It provides incident management for both planned (e.g. major sporting events) and unplanned incidents (e.g. major weather events)	Existing	Normal	Traffic Management		
FDOT District 5	Central Florida Data Warehouse	These systems collect traffic data, crash data (including both short and long form inputs in some counties), weather data, maintenance/construction information and inventory data for each of the transportation-relevant systems in District 5.	Existing	Normal	Archived Data Management Subsystem		
FDOT District 5	Central Florida TMC Information Network	This element represents an information sharing network between TMCs in the region.	Planned	Normal	Other Traffic Management		
FDOT District 5	FDOT District 5 Construction and Maintenance	This element represents the dispatch function for the districts maintenance and construction operations.	Existing	Normal	Maintenance and Construction Management		
FDOT District 5	FDOT District 5 Emergency Operations Center	Represents the District Emergency Operation Center. Each FDOT district maintains its own Emergency Operations Center which is activated for major incidents that affect the district.	Existing	Normal	Emergency Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
FDOT District 5	FDOT District 5 Equipment Repair Facility	This facility provides repair and maintenance services for FDOT District 5 maintenance vehicles and equipment (e.g. portable DMS).	Existing	Normal	Equipment Repair Facility		
FDOT District 5	FDOT District 5 Field Equipment	Represents the ITS field equipment operated by that is owned and operated by FDOT to manage traffic on state roads and interstates in District 5. This includes vehicle detectors, CCTV cameras, dynamic message signs, road weather information sensors, etc., to control and monitor traffic.	Existing	Normal	Roadway Subsystem		
FDOT District 5	FDOT District 5 Infrastructure Monitoring Equipment	Infrastructure monitoring equipment including IR, cameras and motion detectors. These sensors and detectors are operated by FDOT District 5 to monitor and protect FDOT infrastructure and facilities, and not for traffic monitoring.	Planned	Normal	Security Monitoring Subsystem		
FDOT District 5	FDOT District 5 Maintenance Vehicles	Represents the ITS-devices (i.e., mobile data terminals) onboard the maintenance and construction vehicle owned and operated by FDOT District 5. This may include vehicles currently operated or owned by private contractors but used for FDOT projects.	Existing	Normal	Maintenance and Construction Vehicle		
FDOT District 5	FDOT District 5 Office	Administrative HQ for the district.	Existing	Normal	Maintenance and Construction Management		
FDOT District 5	FDOT District 5 Public Information Office Systems	Systems operated by the public information office that provide long-range traveler information, such as road construction advisories, to the media, other organizations, and travelers in District 5. The information provided may include planned closures, maintenance activities, and other non-real time travel advisories.	Existing	Normal	Information Service Provider		
FDOT District 5	FDOT District 5 Transportation Data Warehouse	This system collects and archives traffic data, land use data, crash data (includes both short and long form inputs in some counties), and inventory data for each of the transportation-relevant systems in District 5. This information is then provided to the statewide archive in Tallahassee.	Existing	Normal	Archived Data Management Subsystem		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
FDOT District 5	FDOT District 5 VII Roadside Equipment	This element represents the roadside equipment that performs VII (Vehicle Infrastructure Integration) data collection and dissemination. This element includes the VII message switch that is used to provide access to the roadside equipment from various centers.	Planned	Normal	Roadway Subsystem		
FDOT Turnpike Enterprise	FTE Boca Data Center	Tolls Operations Center at Boca provides overall administration for FTE Toll system.	Existing	Normal	Toll Administration		
FDOT Turnpike Enterprise	FTE Data Dissemination Field Equipment	Represents the ITS field equipment operated by the Florida Turnpike Enterprise including DMSs, HARs, and other public information dissemination systems. Includes portable DMSs.	Existing	Normal	Roadway Subsystem		
FDOT Turnpike Enterprise	FTE Motorist Aid Call Boxes	Emergency call boxes operated by the FDOT Turnpike Enterprise and are connected to an Operations Center.	Existing	Normal	Remote Traveler Support		
FDOT Turnpike Enterprise	FTE Operations Center (Turkey Lake)	This Turnpike Enterprise operations center is located at Turkey Lake and manages Turnpike operations in the northern portion of the turnpike system. This regional TMC is staffed by both FDOT Turnpike and Florida Highway Patrol personnel.	Existing	Normal	Emergency Management		
FDOT Turnpike Enterprise	FTE Operations Center (Turkey Lake)	This Turnpike Enterprise operations center is located at Turkey Lake and manages Turnpike operations in the northern portion of the turnpike system. This regional TMC is staffed by both FDOT Turnpike and Florida Highway Patrol personnel.	Existing	Normal	Information Service Provider		
FDOT Turnpike Enterprise	FTE Operations Center (Turkey Lake)	This Turnpike Enterprise operations center is located at Turkey Lake and manages Turnpike operations in the northern portion of the turnpike system. This regional TMC is staffed by both FDOT Turnpike and Florida Highway Patrol personnel.	Existing	Normal	Maintenance and Construction Management		
FDOT Turnpike Enterprise	FTE Operations Center (Turkey Lake)	This Turnpike Enterprise operations center is located at Turkey Lake and manages Turnpike operations in the northern portion of the turnpike system. This regional TMC is staffed by both FDOT Turnpike and Florida Highway Patrol personnel.	Existing	Normal	Other Traffic Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
FDOT Turnpike Enterprise	FTE Operations Center (Turkey Lake)	This Turnpike Enterprise operations center is located at Turkey Lake and manages Turnpike operations in the northern portion of the turnpike system. This regional TMC is staffed by both FDOT Turnpike and Florida Highway Patrol personnel.	Existing	Normal	Toll Administration		
FDOT Turnpike Enterprise	FTE Operations Center (Turkey Lake)	This Turnpike Enterprise operations center is located at Turkey Lake and manages Turnpike operations in the northern portion of the turnpike system. This regional TMC is staffed by both FDOT Turnpike and Florida Highway Patrol personnel.	Existing	Normal	Traffic Management		
FDOT Turnpike Enterprise	SunPass Customer Service Center	Customer Service Centers (CSCs) for the SunPass electronic toll system, providing administrative back office and customer support functions for the electronic toll system.	Existing	Normal	Toll Administration		
FDOT Turnpike Enterprise	SunPass Tag	SunPass vehicle transponder used for electronic payment of toll and other, e.g. Airport Parking.	Existing	Normal	Traveler Card		
FDOT Turnpike Enterprise	SunPass Tag	SunPass vehicle transponder used for electronic payment of toll and other, e.g. Airport Parking.	Existing	Normal	Vehicle		
FDOT/LYNX	FDOT District 5 Road Ranger Service Patrol Dispatch	This is the service patrol operated by FDOT/LYNX that provides motorist assistance on limited access roads.	Existing	Normal	Emergency Management		
FDOT/LYNX	FDOT District 5 Road Ranger Service Patrol Vehicles	Represents the ITS-devices (i.e., mobile data terminals) onboard the service patrol vehicles that provide roadside assistance to individuals traveling on limited access roads in District 5.	Existing	Normal	Emergency Vehicle Subsystem		
Financial Institutions	Financial Institutions	Banking and financial institutions used by ITS systems to perform various banking transactions (e.g., funds transfers, credit card account management).	Existing	Normal	Financial Institution		
Florida Department of Highway Safety and Motor Vehicles	Florida DMV Licensing and Registration System	Vehicle registration systems of the Florida Department of Highway Safety and Motor Vehicles. These systems provides commercial driver's license and vehicle registration in the State of Florida.	Existing	Normal	DMV		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Florida Department of Law Enforcement	FDLE Headquarters	Represents the Florida Department of Law Enforcement Office in Tallahassee that originates Amber Alerts.	Existing	Normal	Emergency Management		
Florida Department of Law Enforcement	FDLE Headquarters	Represents the Florida Department of Law Enforcement Office in Tallahassee that originates Amber Alerts.	Existing	Normal	Enforcement Agency		
Florida Division of Emergency Management	Florida Statewide EOC/Warning Point (SEOC)	The state emergency operations center, located in Tallahassee that provides central command and control during major emergencies in the state of Florida. Serves as an information clearinghouse for disaster-related information. Includes a regional database containing the evacuation routes for the regional area. Includes basic primary and secondary route information.	Existing	Normal	Emergency Management		
Florida Highway Patrol	FHP Regional Administration	FHP regional administration office.	Existing	Normal	Emergency Management		
Florida Highway Patrol	FHP Regional Dispatch	Represents the regional dispatch centers for the Florida Highway Patrol. The dispatch centers provide call taking, communications, and dispatch functions.	Existing	Normal	Emergency Management		
Florida Highway Patrol	FHP Regional Dispatch	Represents the regional dispatch centers for the Florida Highway Patrol. The dispatch centers provide call taking, communications, and dispatch functions.	Existing	Normal	Enforcement Agency		
Florida Highway Patrol	FHP Troop K Dispatch	Represents the dispatch center for the Florida Highway Patrol Troop K, which patrols the FTE Highway System. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Emergency Management		
Florida Highway Patrol	FHP Troop K Dispatch	Represents the dispatch center for the Florida Highway Patrol Troop K, which patrols the FTE Highway System. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Enforcement Agency		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Florida Highway Patrol	Florida Highway Patrol Vehicles	Represents the ITS-devices (i.e., mobile data terminals) onboard the vehicles that are owned by the state and operated by the Florida Highway Patrol.	Existing	Normal	Emergency Vehicle Subsystem		
Greater Orlando Airport Authority	Orlando International Airport	The major international airport serving the city of Orlando and the surrounding area.	Existing	Normal	Multimodal Transportation Service Provider		
Lake County	Lake County Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by Lake County that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
Lake County	Lake County Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for Lake County.	Existing	Normal	Traffic Management		
Lake County	Lake Trans Dispatch	Represents the dispatch function of Lake Trans transit.	Existing	Normal	Transit Management		
Lake County	Lake Trans Vehicles	Represents the ITS equipment installed on the transit vehicles that are owned and operated by Lake Trans. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
Local Agencies	Local Agency Traveler Information System	Generic element representing the traveler information systems that are operated by local governments and agencies. They provide real-time and planned traveler information in the region through a variety of methods, including web sites, interactive telephone systems, pagers, etc.	Existing	Normal	Information Service Provider		
Local Agencies	Local EOCs	Generic element representing municipal and local emergency operation centers (EOCs). The Local EOC provides a coordinating point for the effective management of local emergencies to catastrophic events in and around a metropolitan area. It is the lead organization in coordinating disaster response from a municipal level to state and federal.	Existing	Normal	Emergency Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Local Agencies	Local Fire/EMS Dispatch	Generic element representing the local and municipal Fire Rescue and EMS dispatch centers. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Emergency Management		
Local Agencies	Local Fire/EMS Vehicles	Generic element representing the ITS-devices (i.e., mobile data terminals) onboard the fire trucks, fire apparatus, EMS vehicles and other vehicles operated by local and municipal fire departments.	Existing	Normal	Emergency Vehicle Subsystem		
Local Agencies	Local Police Dispatch	Generic element representing the local and municipal police dispatch centers. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Emergency Management		
Local Agencies	Local Police Dispatch	Generic element representing the local and municipal police dispatch centers. The dispatch center provides call taking, communications, and dispatch functions.	Existing	Normal	Enforcement Agency		
Local Agencies	Local Police Vehicles	Generic element representing the ITS-devices (i.e., mobile data terminals) onboard local and municipal police vehicles.	Existing	Normal	Emergency Vehicle Subsystem		
Local Media	Newspapers, Radio, Television Stations	The numerous local media (newspaper, radio, television) stations.	Existing	Normal	Media		
Local Transit Operators	Local Transit Operator Systems	This generic element represents smaller, local and municipal transit agencies providing fixed route and paratransit service in the region. This element also represents the systems that provide operations, maintenance, customer information, planning and management functions for the transit agency.	Planned	Normal	Transit Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Local Venue Promoters	Local Venue Event Scheduling System	This general system represents the convention centers, music centers, sporting facilities and other venues that regularly host events that impact traffic. Specific examples in the Southeast Florida region include the Pompano Beach Harness Track, the Gulfstream Race Track, Thomas J. White Stadium, Lockhart Stadium, and the Heron Bay Country Club. Major venues for professional sports teams (e.g., American Airlines Arena and National Car Rental Center) are specifically identified by other elements in this regional architecture.	Existing	Normal	Event Promoters		
LYNX	Access LYNX Paratransit Systems	Shuttle services that do not operate on fixed routes or schedules, offering door to door service in the District 5 Region. This includes systems for qualified users. This includes Transportation Disadvantaged Systems. In emergencies the system may be used to provide service to the general public.	Existing	Normal	Transit Management		
LYNX	Access LYNX Paratransit Vehicles	Represents the ITS equipment installed on the transit vehicles that are owned and operated by Access LYNX on its shuttle services that do not operate on fixed routes or schedules, offering door to door service in the District 5 Region. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
LYNX	LYNX Commuter Rail	A potential commuter rail system that would serve the greater Orlando area, providing principal connections between the planned intermodal center and many business and recreational hubs in and around Orlando.	Planned	Normal	Multimodal Transportation Service Provider		
LYNX	LYNX FlexBus Transit Central System	Demand responsive transit services that operate on designated fixed routes (but not schedules), offering door to door service for ADA clients and designated transit stop to transit stop service for other clients in the District 5 Region. This system can operate in a "shared ride" fashion where multiple requests for pickup can be accommodated by one FlexBus for qualified users. This includes Transportation Disadvantaged Systems. In emergencies the system may be used to provide service to the general public.	Planned	Normal	Transit Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
LYNX	LYNX FlexBus Transit Vehicles	This element represents the ITS equipment installed on the transit vehicles that are owned and operated by LYNX (or its subcontractors) for its FlexBus service that operates as demand response vehicles, offering designated transit stop to stop service in guaranteed 12 minute intervals for the District 5 Region. Capabilities may include AVL, CAD systems, MDTs, passenger counting, transit scheduling, fare management, on-board DMS, CCTV and silent alarms.	Planned	Normal	Transit Vehicle Subsystem		
LYNX	LYNX Maintenance Dispatch	Represents the LYNX maintenance facilities that perform vehicle maintenance and dispatch maintenance vehicles.	Existing	Normal	Transit Management		
LYNX	LYNX Operations Center	The transit operations center provides fixed route transit service in Orange Osceola, and Seminole Counties serving the cities of Orlando and Kissimmee and surrounding areas. The center also provides DOT express bus service between Daytona Beach and Orlando, in cooperation with VOTRAN. The center provides operations, maintenance, customer information, planning and management functions for the transit property. This element spans distinct central dispatch and garage management systems.	Existing	Normal	Transit Management		
LYNX	LYNX Road Ranger Vehicles	Represents the ITS-devices (i.e., mobile data terminals) onboard the service patrol vehicles that provide roadside assistance to LYNX fixed-route transit and paratransit vehicles.	Planned	Normal	Emergency Vehicle Subsystem		
LYNX	LYNX Transit Vehicles	Represents the ITS equipment installed on the fixed route transit vehicles, serving routes in Orange, Osceola, and Seminole counties, providing service to the cities of Orlando and Kissimmee and surrounding areas. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
LYNX	LYNX Website	Represents the website operated by LYNX that provides schedule, route, and fare information.	Existing	Normal	Information Service Provider		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
LYNX	Orlando Intermodal Center	Centers are planned for several locations in and around Orlando. Supported by LYNX, taxi, private bus, and other possibilities like commuter rail, Greyhound.	Planned	Normal	Multimodal Transportation Service Provider		
LYNX	Virtual Travel Planning Center	This center will provide trip planning services for travelers in the Orlando region. Best multi-modal routes will be provided based on the travelers requirements.	Planned	Normal	Emergency Management		
LYNX	Virtual Travel Planning Center	This center will provide trip planning services for travelers in the Orlando region. Best multi-modal routes will be provided based on the travelers requirements.	Planned	Normal	Information Service Provider		
Manatee County Transportation Department	Manatee County Traffic Signal Control System	Manatee county currently operates a Distributed Master Computerized Traffic Signal Control System. In the future, this system will evolve to provide coordinated management of a variety of traffic information and control systems in the county, providing integrated control of systems both in the county and within the jurisdiction of cities within the county. See the companion "Manatee County and Cities Advanced Traffic Management System" element for a description of these planned capabilities.	Existing	Normal	Traffic Management		
Marion County Government	Marion County Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by Marion County that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
Marion County Government	Marion County Traffic Management Center	This staffed operational center controls traffic signals and other associated traffic management devices for Marion County.	Planned	Normal	Traffic Management		
Marion County Government	Marion Transit Services Dispatch	Paratransit service operated by Marion County	Existing	Normal	Transit Management		
Marion County Government	Marion Transit Vehicles	Represents the ITS equipment installed on the fixed-route transit vehicles that are owned and operated by the Marion Transit. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem

Orlando/Orange County Expressway Authority	OOCEA Construction and Maintenance Operations	Represents maintenance and construction dispatch for OOCEA	Existing	Normal	Maintenance and Construction Management		
Orlando/Orange County Expressway Authority	OOCEA Maintenance Vehicles	Represents the ITS-devices (i.e., mobile data terminals) onboard the maintenance and construction vehicle owned, operated and/or contracted by OOCEA. This may include vehicles currently operated or owned by private contractors but used for OOCEA projects.	Existing	Normal	Maintenance and Construction Vehicle		
Orlando/Orange County Expressway Authority	OOCEA Road Ranger Dispatch	The OOCEA Road Ranger Service Patrol Dispatch is currently handled by a private contractor and done through the Florida Highway Patrol dispatch capabilities.	Existing	Normal	Emergency Management		
Orlando/Orange County Expressway Authority	OOCEA Road Ranger Service Patrol Vehicles	Represents the ITS-devices (i.e., mobile data terminals) onboard the vehicles that provide roadside assistance to individuals traveling on the OOCEA managed systems. Road ranger vehicles contracted out to OOCEA. Have AVL. Dispatched by FHP at FDOT D5 RTMC. Roam a circuit by default.	Existing	Normal	Emergency Vehicle Subsystem		
Orlando/Orange County Expressway Authority	OOCEA Toll Plazas	Electronic toll collection equipment, E.g., tag readers, toll booth equipment, lane curtains, etc., in Orange County.	Existing	Normal	Toll Collection		
Orlando/Orange County Expressway Authority	OOCEA Traffic Management Server	Represents the OOCEA server used to collect and disseminate travel time information.	Existing	Normal	Information Service Provider		
Orlando/Orange County Expressway Authority	OOCEA Traffic Management Server	Represents the OOCEA server used to collect and disseminate travel time information.	Existing	Normal	Toll Administration		
Orlando/Orange County Expressway Authority	OOCEA Traffic Management Server	Represents the OOCEA server used to collect and disseminate travel time information.	Existing	Normal	Traffic Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Orlando/Orange County Expressway Authority	OOCEA Website	Website operated by OOCEA that provides toll system and construction information.	Existing	Normal	Information Service Provider		
Osceola County Engineering	Osceola County Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by the City of Kissimmee that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
Osceola County Engineering	Osceola County Traffic Operations Center	This staffed operational center controls traffic signals and other associated traffic management devices for the city of Kissimmee.	Existing	Normal	Traffic Management		
Osceola County Expressway Authority	OOCEA Field Equipment	Represents the ITS field equipment operated by OOCEA, including traffic signals, vehicle detectors, CCTV cameras, dynamic message signs, etc., to control and monitor traffic.	Existing	Normal	Roadway Subsystem		
Osceola County Expressway Authority	Osceola County Customer Service Center	Customer service center providing administrative back office and customer support functions for the Osceola County electronic toll collection system.	Existing	Normal	Toll Administration		
Parking Facility Operators	Private/Public Parking Facility Operators	Represents major parking facilities in downtown areas, resort areas, airports, and other major travel destinations and transportation hubs. May also include park-and-ride facilities.	Existing	Normal	Parking Management		
Polk County Transit Services	PCTS Paratransit Vehicles	Represents the ITS equipment installed on the paratransit vehicles that are owned and operated by Polk County Transit. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
Polk County Transit Services	Polk County Transit Services	Dispatch function for Polk County Transit.	Existing	Normal	Transit Management		
Private Bus Companies	I-RIDE Tourist Shuttle Dispatch	This includes the transit operations centers that manage tourist shuttles in the Orlando region. This includes the Disney bus dispatch operation as well as other tourist shuttle dispatch centers in the region.	Existing	Normal	Transit Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Private Bus Companies	I-RIDE Tourist Shuttles	Represents the ITS equipment installed on the shuttle vehicles that are owned and operated for I-RIDE. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
Private Commercial Vehicle and Fleet Operators	Commercial Vehicle	Privately owned commercial vehicles. Included in the architecture to cover HAZMAT incident reporting.	Existing	Normal	Basic Commercial Vehicle		
Private Commercial Vehicle and Fleet Operators	Commercial Vehicle	Privately owned commercial vehicles. Included in the architecture to cover HAZMAT incident reporting.	Existing	Normal	Basic Vehicle		
Private Commercial Vehicle and Fleet Operators	Commercial Vehicle	Privately owned commercial vehicles. Included in the architecture to cover HAZMAT incident reporting.	Existing	Normal	Commercial Vehicle Subsystem		
Private Commercial Vehicle and Fleet Operators	Commercial Vehicle	Privately owned commercial vehicles. Included in the architecture to cover HAZMAT incident reporting.	Existing	Normal	Vehicle		
Private Commercial Vehicle and Fleet Operators	Private Fleet Vehicle Dispatch Systems	Charter bus fleets, major truck fleet operators, taxi services, limo services, etc. that operate in Florida. Note that the dispatch may actually be outside the state.	Existing	Normal	Fleet and Freight Management		
Private Concierge Service Provider	Private Sector Mayday/Concierge Service Center	Private sector services, such as GM OnStar, that provide emergency Mayday and a variety of other traveler convenience services to their clients.	Existing	Normal	Archived Data User Systems		
Private Concierge Service Provider	Private Sector Mayday/Concierge Service Center	Private sector services, such as GM OnStar, that provide emergency Mayday and a variety of other traveler convenience services to their clients.	Existing	Normal	Emergency Management		
Private Concierge Service Provider	Private Sector Mayday/Concierge Service Center	Private sector services, such as GM OnStar, that provide emergency Mayday and a variety of other traveler convenience services to their clients.	Existing	Normal	Information Service Provider		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Private Maintenance Contractors	Private Maintenance and Construction Dispatch	Represent private maintenance contractors responsible for maintaining ITS field equipment and other asset management inventories.	Existing	Normal	Maintenance and Construction Management		
Private Sector ISPs	Private Sector Traveler Information Services	Private Information Service Providers of traveler information. e.g. SmartGuide, SmartRoutes, Shadow Traffic, MetroNetworks, TrafficCenter, etc...	Existing	Normal	Information Service Provider		
Private Transit Operators	Inter-City Bus Service	Inter-city bus services that provide passenger bus service to and between cities in Florida.	Existing	Normal	Multimodal Transportation Service Provider		
Private Transit Operators	Inter-City Bus Service	Inter-city bus services that provide passenger bus service to and between cities in Florida.	Existing	Normal	Transit Management		
Private Weather Information Providers	Private/Public Weather Information Providers	This element represents the variety of public and private weather services that provide weather forecasts and real-time weather information.	Existing	Normal	Weather Service		
Private/Public Regional Medical Centers	Private/Public Ambulance Dispatch	Dispatch center for private/public ambulance service. Currently operating out of the county dispatch centers.	Existing	Normal	Emergency Management		
Private/Public Regional Medical Centers	Private/Public Ambulance Vehicles	Generic element representing the ITS-devices (i.e., mobile data terminals) onboard private/public ambulances. These emergency medical services vehicles are part of an rapid and effective response to highway incidents that include injuries.	Existing	Normal	Emergency Vehicle Subsystem		
Private/Public Regional Medical Centers	Regional Medical Centers	Regional hospitals and care facilities.	Existing	Normal	Care Facility		
Probe Information Providers	Probe Monitoring Systems	This system collects wide-area probe data through the use of various technologies including, but not limited to, location of cell phones, automated vehicle locators, and other technologies.	Planned	Normal	Information Service Provider		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Rail Operator	Rail Intermodal Terminals	Represents intermodal rail terminals used to transfer freight between commercial vehicles and rail.	Existing	Normal	Intermodal Freight Depot		
Rail Operator	Rail Operations Centers	Represents the operational control centers for heavy rail operators that serve Florida.	Existing	Normal	Other Data Sources		
Rail Operator	Rail Operations Centers	Represents the operational control centers for heavy rail operators that serve Florida.	Existing	Normal	Rail Operations		
Rail Operator	Railroad Operators Wayside Equipment	Grade crossing equipment operated by the railroads which provides driver warnings and notifies adjacent traffic control equipment of approaching trains.	Existing	Normal	Wayside Equipment		
Regional Public Safety Agencies	911 Emergency Call Centers	Represents the various county and local call taker systems that handle 911 calls. This includes the FHP, county sheriffs, and many local police call taker systems. It also includes E911 systems.	Existing	Normal	Emergency Management		
Regional Public Safety Agencies	911 Emergency Call Centers	Represents the various county and local call taker systems that handle 911 calls. This includes the FHP, county sheriffs, and many local police call taker systems. It also includes E911 systems.	Existing	Normal	Other Emergency Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Regional Public Safety Agencies	Other Public Safety Communications and Dispatch Centers	This element represents the connection to other state (FHP and FDLE), County (Sheriff and Fire Rescue), and Local (municipal police and fire departments) law enforcement, fire, and EMS call taker and dispatch centers. It may include campus law enforcement providers, volunteer fire/rescue departments, federal law enforcement agencies, federal homeland security agencies, and other centers established for major incidents. This element is used in the architecture to show a consistent interface for the exchange of data between public safety systems that supports incident notification, hand-offs, resource coordination, and incident response coordination. Communication between these centers uses a mesh topology - any emergency management center can communicate directly with any other emergency management center. Note that this element also represents interfaces to emergency management centers in adjacent jurisdictions that also coordinate during major incidents.	Existing	Normal	Emergency Management		
Regional Public Safety Agencies	Other Public Safety Communications and Dispatch Centers	This element represents the connection to other state (FHP and FDLE), County (Sheriff and Fire Rescue), and Local (municipal police and fire departments) law enforcement, fire, and EMS call taker and dispatch centers. It may include campus law enforcement providers, volunteer fire/rescue departments, federal law enforcement agencies, federal homeland security agencies, and other centers established for major incidents. This element is used in the architecture to show a consistent interface for the exchange of data between public safety systems that supports incident notification, hand-offs, resource coordination, and incident response coordination. Communication between these centers uses a mesh topology - any emergency management center can communicate directly with any other emergency management center. Note that this element also represents interfaces to emergency management centers in adjacent jurisdictions that also coordinate during major incidents.	Existing	Normal	Other Emergency Management		
Regional Public Safety Agencies	Regional HAZMAT Team	Represents regional HAZMAT response teams. May consist of local, county and/or FDOT public safety responders.	Existing	Normal	Emergency Management		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Regional Public Safety Agencies	Regional Incident and Mutual Aid Network	Regional Public Safety Communications Network.	Existing	Normal	Other Emergency Management		
Regional Transit Management Agencies	Transit Facility Security Monitoring System	The surveillance systems and emergency notification systems that can be used to improve security in transit terminals and other public areas.	Existing	Normal	Remote Traveler Support		
Regional Transit Management Agencies	Transit Facility Security Monitoring System	The surveillance systems and emergency notification systems that can be used to improve security in transit terminals and other public areas.	Existing	Normal	Security Monitoring Subsystem		
Regional Transit Management Agencies	Transit Kiosks	A generic element representative of all kiosks that provide individuals with traveler information. Transit kiosks provide transit information to transit customers, support electronic fare payment, and enhance security at transit stops. In the statewide architecture, the emphasis is on the interface to the electronic payment card, which is a statewide interface.	Planned	Normal	Remote Traveler Support		
Regional Transit Management Agencies	Transit Stops/Stations Equipment	The places where travelers "catch the bus" and need schedule, transit service, and real-time arrival information to support their travel choices.	Planned	Normal	Remote Traveler Support		
SCAT - Space Coast Area Transit	SCAT Dispatch Center	Combined fixed route and paratransit dispatch center for SCAT.	Existing	Normal	Transit Management		
SCAT - Space Coast Area Transit	SCAT Transit Vehicles	Represents the ITS equipment installed on the fixed-route transit and paratransit vehicles that are owned and operated by the Space Coast Area Transit (SCAT). Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
SCAT - Space Coast Area Transit	SCAT Website	Website containing schedule, fare and route information.	Existing	Normal	Information Service Provider

Seminole County	Orlando-Sanford International Airport	This international airport serves the Orlando region, providing	Existing	Normal	Multimodal Transportation Service Provider		
Seminole County	Seminole County Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by Seminole County that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		
Seminole County	Seminole County Traffic Action Center (SEMTAC)	The SEMTAC center controls traffic signals and other associated traffic management devices for Seminole County.	Existing	Normal	Traffic Management		
St. Lucie County Transit	St. Lucie Community Transit Systems	The transit operations center provides fixed route and demand-responsive transit service countywide. The center provides operations, maintenance, customer information, planning and management functions for the transit property. Also represents other related transit systems, including transit security systems, and the fare management systems.	Existing	Normal	Emergency Management		
St. Lucie County Transit	St. Lucie Community Transit Systems	The transit operations center provides fixed route and demand-responsive transit service countywide. The center provides operations, maintenance, customer information, planning and management functions for the transit property. Also represents other related transit systems, including transit security systems, and the fare management systems.	Existing	Normal	Transit Management		
SunGuide Partners/ISP Vendor Team	Central Florida Traveler Information System	The system that provides near real-time advanced traveler information in the Central Florida region. This includes the regional 511 system. The system may include video images, travel time information, construction information, and subscription services.	Planned	Normal	Information Service Provider		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
SUNTRAN	SUNTRAN Transit Dispatch Center	The transit operations center provides fixed route transit service in the City of Ocala and Marion County. The center provides operations, maintenance, customer information, planning and management functions for the transit property. This element spans distinct central dispatch and garage management systems.	Existing	Normal	Transit Management		
SUNTRAN	SUNTRAN Transit Vehicles	Represents the ITS equipment installed on the fixed route transit vehicles operated by SUNTRAN, providing service to the City of Ocala and Marion County. Capabilities may include passenger counting, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
Traveler Information Radio Network	Traveler Info. Radio Network Stations	These radio stations provide drivers with information about current traffic and roadway conditions.	Planned	Normal	Media		
Travelers	Private Travelers Personal Computing Devices	E.g., cellular telephones, PDAs, and personal computers.	Existing	Normal	Personal Information Access		
Travelers	Smart Card	A card used by a traveler to pay for transportation-related services (e.g., parking fees, transit fares, traveler services).	Existing	Normal	Traveler Card		
Travelers	Vehicles	Represents the ITS elements installed on private traveler vehicles.	Existing	Normal	Vehicle		
VII Provider	VII Private Sector Partner	Private partner for vehicle information initiative (VII) that coordinates with public agencies and their systems.	Planned	Normal	Traffic Management		
Volusia County	Daytona Beach International Airport	General aviation and freight airports in District 5.	Existing	Normal	Multimodal Transportation Service Provider		
Volusia County	Volusia County Field Equipment	Represents the ITS field equipment (traffic controllers, detectors, traffic control devices, and driver information systems) operated by Volusia County that monitor and controls traffic.	Existing	Normal	Roadway Subsystem		

Turbo Architecture Table - Central Florida Regional ITS Architecture - FDOT District 5

Stakeholder	Element Name	Element Description	Element Status	Element Type	Associated Entity	Parent Element	Related Architecture
Volusia County	Volusia County Traffic Management Center	These staffed operational centers controls traffic signals and other associated traffic management devices for Volusia County. There are two centers at Holly Hill and Deland.	Existing	Normal	Traffic Management		
Volusia County MPO	Volusia County MPO Transportation Data Collection System	This system collects transportation data for the Volusia County Metropolitan Planning Organization to support transportation planning.	Planned	Normal	Archived Data Management Subsystem		
VOTRAN	VOTRAN Maintenance Dispatch	Maintenance facility for VOTRAN transit vehicles.	Existing	Normal	Transit Management		
VOTRAN	VOTRAN Transit Dispatch	The transit operations center provides fixed route transit and paratransit service to Volusia County, and provides broader service to the District 5 region in coordination with LYNX transit. The center provides operations, maintenance, customer information, planning and management functions for the transit property.	Existing	Normal	Emergency Management		
VOTRAN	VOTRAN Transit Dispatch	The transit operations center provides fixed route transit and paratransit service to Volusia County, and provides broader service to the District 5 region in coordination with LYNX transit. The center provides operations, maintenance, customer information, planning and management functions for the transit property.	Existing	Normal	Transit Management		
VOTRAN	VOTRAN Transit Vehicles	Represents the ITS equipment installed on the fixed route and paratransit vehicles that are owned and operated by Volusia County. Capabilities may include passenger counting, AVL, transit scheduling, and fare management.	Existing	Normal	Transit Vehicle Subsystem		
VOTRAN	VOTRAN Website	VOTRAN Website provides transit route and paratransit information.	Existing	Normal	Information Service Provider		

Section 6

ITS Element Requirements Worksheet

ITS Element Requirements Worksheet – Brevard County

Element Name	Functional Area Description	Status	Functional Area	Entity Name
Brevard County Field Equipment	Field elements to monitor and control traffic at multimodal crossings, such as draw bridges and other crossings between highway traffic and other modes; does not include highway-rail intersection.		Multimodal Crossing Control	Roadway Subsystem
Brevard County Field Equipment	Field elements that monitor traffic conditions using loop detectors and CCTV cameras.		Roadway Basic Surveillance	Roadway Subsystem
Brevard County Field Equipment	Environmental sensors, surface and sub-surface, that collect weather and road surface information. Weather conditions measured include temperature, wind, humidity, precipitation, and visibility. Sensors measure road surface temperature, moisture, icing, salinity, etc.		Roadway Environmental Monitoring	Roadway Subsystem
Brevard County Field Equipment	Field elements that control and send data to other field elements (such as environmental sensors that send data to a DMS or coordination between traffic controllers on adjacent intersections), without center control.		Roadway Equipment Coordination	Roadway Subsystem
Brevard County Field Equipment	Field elements to collect traffic and road conditions from passing vehicles; both anonymous toll/parking tag readings for link time calculations and smart probe data supported.		Roadway Probe Beacons	Roadway Subsystem
Brevard County Field Equipment	Field elements including traffic signal controllers for use at signalized intersections; also supports pedestrian crossings.		Roadway Signal Controls	Roadway Subsystem
Brevard County Field Equipment	Field elements that provide the capability to receive vehicle signal priority requests and control traffic signals accordingly.		Roadway Signal Priority	Roadway Subsystem
Brevard County Field Equipment	Driver information systems, such as dynamic message signs and Highway Advisory Radio (HAR).		Roadway Traffic Information Dissemination	Roadway Subsystem
Brevard County Field Equipment	Work zone intrusion detection devices (to detect vehicle intrusion upon a work zone or crew worker movement across a work zone boundary) and intrusion alerting devices that provide alerts to crew and drivers.		Roadway Work Zone Safety	Roadway Subsystem
Brevard County Field Equipment	Field elements in maintenance and construction areas including CCTV cameras, driver information systems (such as DMS), and gates/barriers that monitor and control traffic and provide information directly to drivers in affected areas.		Roadway Work Zone Traffic Control	Roadway Subsystem
Brevard County Field Equipment	Field elements at highway-rail intersections (HRIs) where operational requirements do not dictate advanced features (e.g., where rail operational speeds are less than 80 miles per hour). Includes traditional HRI warning systems augmented with other standard traffic management devices.		Standard Rail Crossing	Roadway Subsystem

ITS Element Requirements Worksheet – Brevard County

Element Name	Functional Area Description	Status	Functional Area	Entity Name
Brevard County Traffic Operations Center	Management of traffic sensors and surveillance (CCTV) equipment, and distribution of the collected information to other centers and operators.		Collect Traffic Surveillance	Traffic Management
Brevard County Traffic Operations Center	Remotely monitor and control highway-rail intersection (HRI) equipment, includes standard speed active warning systems and high speed systems which provide additional information on approaching trains and detect and report on obstructions in the HRI.		HRI Traffic Management	Traffic Management
Brevard County Traffic Operations Center	Management of environmental sensors and assimilation of collected data with other current and forecast road conditions and surface weather information from weather service providers and roadway maintenance operations.		TMC Environmental Monitoring	Traffic Management
Brevard County Traffic Operations Center	Development, coordination, and execution of special traffic management strategies during evacuation and subsequent reentry of a population in the vicinity of a disaster or major emergency. Interfaces with emergency management and other traffic management centers.		TMC Evacuation Support	Traffic Management
Brevard County Traffic Operations Center	Remotely controls ramp meters, interchange connector meters, lane control signals, mainline meters, and variable speed control systems.		TMC Freeway Management	Traffic Management
Brevard County Traffic Operations Center	Remotely controls traffic and video sensors to support incident detection and verification; exchange information with other agencies including emergency management, maintenance and construction, alerting and advisory systems, event promoters, intermodal freight depots, and traveler information systems.		TMC Incident Detection	Traffic Management
Brevard County Traffic Operations Center	Center-based capability to formulate an incident response that takes into account the incident potential, incident impacts, and/or resources required for incident management including proposing and facilitating the dispatch of emergency response and service vehicles as well as coordinating response with all appropriate cooperating agencies.		TMC Incident Dispatch Coordination/Communication	Traffic Management
Brevard County Traffic Operations Center	Remotely monitors and manages multimodal crossings, such as draw bridges and other crossings between highway traffic and other modes; does not include highway-rail intersection.		TMC Multimodal Crossing Management	Traffic Management
Brevard County Traffic Operations Center	Collects, assimilates, and disseminates vehicle probe data collected from roadside beacons and centers controlling transit vehicles, emergency vehicles, toll collection points, and route-guided vehicles.		TMC Probe Information Collection	Traffic Management

ITS Element Requirements Worksheet – Brevard County

Element Name	Functional Area Description	Status	Functional Area	Entity Name
Brevard County Traffic Operations Center	Coordination between traffic management centers in order to share traffic information between centers as well as control of traffic management field equipment. This may be used during incidents and special events and during day-to-day operations.		TMC Regional Traffic Control	Traffic Management
Brevard County Traffic Operations Center	Remotely controls traffic signal controllers to implement traffic management strategies at signalized intersections based on traffic conditions, incidents, emergency vehicle preemptions, pedestrian crossings, etc.		TMC Signal Control	Traffic Management
Brevard County Traffic Operations Center	Controls dissemination of traffic-related data to other centers, the media, and travelers via the driver information systems (DMS, HAR) that it operates.		TMC Traffic Information Dissemination	Traffic Management
Brevard County Traffic Operations Center	Coordination with maintenance systems using work zone images and traveler information systems (such as DMS), and distribution of work plans so that work zones are established that have minimum traffic impact.		TMC Work Zone Traffic Management	Traffic Management
Brevard County Traffic Operations Center	Collection and storage of traffic management data. For use by operations personnel or data archives in the region.		Traffic Data Collection	Traffic Management
Brevard County Traffic Operations Center	Monitoring and remote diagnostics of field equipment - detect failures, issue problem reports, and track the repair or replacement of the failed equipment.		Traffic Maintenance	Traffic Management

ITS Element Requirements Worksheet – City of Melbourne

Element Name	Functional Area Description	Status	Functional Area	Entity Name
City of Melbourne Field Equipment	Field elements that monitor traffic conditions using loop detectors and CCTV cameras.		Roadway Basic Surveillance	Roadway Subsystem
City of Melbourne Field Equipment	Environmental sensors, surface and sub-surface, that collect weather and road surface information. Weather conditions measured include temperature, wind, humidity, precipitation, and visibility. Sensors measure road surface temperature, moisture, icing, salinity, etc.		Roadway Environmental Monitoring	Roadway Subsystem
City of Melbourne Field Equipment	Field elements that control and send data to other field elements (such as environmental sensors that send data to a DMS or coordination between traffic controllers on adjacent intersections), without center control.		Roadway Equipment Coordination	Roadway Subsystem
City of Melbourne Field Equipment	Field elements to collect traffic and road conditions from passing vehicles; both anonymous toll/parking tag readings for link time calculations and smart probe data supported.		Roadway Probe Beacons	Roadway Subsystem
City of Melbourne Field Equipment	Field elements including traffic signal controllers for use at signalized intersections; also supports pedestrian crossings.		Roadway Signal Controls	Roadway Subsystem
City of Melbourne Field Equipment	Field elements that provide the capability to receive vehicle signal priority requests and control traffic signals accordingly.		Roadway Signal Priority	Roadway Subsystem
City of Melbourne Field Equipment	Driver information systems, such as dynamic message signs and Highway Advisory Radio (HAR).		Roadway Traffic Information Dissemination	Roadway Subsystem
City of Melbourne Field Equipment	Field elements in maintenance and construction areas including CCTV cameras, driver information systems (such as DMS), and gates/barriers that monitor and control traffic and provide information directly to drivers in affected areas.		Roadway Work Zone Traffic Control	Roadway Subsystem
City of Melbourne Field Equipment	Field elements at highway-rail intersections (HRIs) where operational requirements do not dictate advanced features (e.g., where rail operational speeds are less than 80 miles per hour). Includes traditional HRI warning systems augmented with other standard traffic management devices.		Standard Rail Crossing	Roadway Subsystem

ITS Element Requirements Worksheet – City of Melbourne

Element Name	Functional Area Description	Status	Functional Area	Entity Name
City of Melbourne Traffic Operations Center	Management of traffic sensors and surveillance (CCTV) equipment, and distribution of the collected information to other centers and operators.		Collect Traffic Surveillance	Traffic Management
City of Melbourne Traffic Operations Center	Collection and storage of air quality and emissions management information. For use by operations personnel or data archives in the region.		Emissions Data Collection	Emissions Management
City of Melbourne Traffic Operations Center	Remotely monitor and control highway-rail intersection (HRI) equipment, includes standard speed active warning systems and high speed systems which provide additional information on approaching trains and detect and report on obstructions in the HRI.		HRI Traffic Management	Traffic Management
City of Melbourne Traffic Operations Center	Management of environmental sensors and assimilation of collected data with other current and forecast road conditions and surface weather information from weather service providers and roadway maintenance operations.		TMC Environmental Monitoring	Traffic Management
City of Melbourne Traffic Operations Center	Development, coordination, and execution of special traffic management strategies during evacuation and subsequent reentry of a population in the vicinity of a disaster or major emergency. Interfaces with emergency management and other traffic management centers.		TMC Evacuation Support	Traffic Management
City of Melbourne Traffic Operations Center	Remotely controls ramp meters, interchange connector meters, lane control signals, mainline meters, and variable speed control systems.		TMC Freeway Management	Traffic Management
City of Melbourne Traffic Operations Center	Remotely controls traffic and video sensors to support incident detection and verification; exchange information with other agencies including emergency management, maintenance and construction, alerting and advisory systems, event promoters, intermodal freight depots, and traveler information systems.		TMC Incident Detection	Traffic Management
City of Melbourne Traffic Operations Center	Center-based capability to formulate an incident response that takes into account the incident potential, incident impacts, and/or resources required for incident management including proposing and facilitating the dispatch of emergency response and service vehicles as well as coordinating response with all appropriate cooperating agencies.		TMC Incident Dispatch Coordination/Communication	Traffic Management

ITS Element Requirements Worksheet – City of Melbourne

Element Name	Functional Area Description	Status	Functional Area	Entity Name
City of Melbourne Traffic Operations Center	Collects, assimilates, and disseminates vehicle probe data collected from roadside beacons and centers controlling transit vehicles, emergency vehicles, toll collection points, and route-guided vehicles.		TMC Probe Information Collection	Traffic Management
City of Melbourne Traffic Operations Center	Coordination between traffic management centers in order to share traffic information between centers as well as control of traffic management field equipment. This may be used during incidents and special events and during day-to-day operations.		TMC Regional Traffic Control	Traffic Management
City of Melbourne Traffic Operations Center	Remotely controls traffic signal controllers to implement traffic management strategies at signalized intersections based on traffic conditions, incidents, emergency vehicle preemptions, pedestrian crossings, etc.		TMC Signal Control	Traffic Management
City of Melbourne Traffic Operations Center	Controls dissemination of traffic-related data to other centers, the media, and travelers via the driver information systems (DMS, HAR) that it operates.		TMC Traffic Information Dissemination	Traffic Management
City of Melbourne Traffic Operations Center	Coordination with maintenance systems using work zone images and traveler information systems (such as DMS), and distribution of work plans so that work zones are established that have minimum traffic impact.		TMC Work Zone Traffic Management	Traffic Management
City of Melbourne Traffic Operations Center	Collection and storage of traffic management data. For use by operations personnel or data archives in the region.		Traffic Data Collection	Traffic Management
City of Melbourne Traffic Operations Center	Monitoring and remote diagnostics of field equipment - detect failures, issue problem reports, and track the repair or replacement of the failed equipment.		Traffic Maintenance	Traffic Management

ITS Element Requirements Worksheet – Space Coast Area Transit

Element Name	Functional Area Description	Status	Functional Area	Entity Name
SCAT Dispatch Center	Management of fixed route transit operations. Planning, scheduling, and dispatch associated with fixed and flexible route transit services. Updates customer service operator systems, and provides current vehicle schedule adherence and optimum scenarios for schedule adjustment.		Transit Center Fixed-Route Operations	Transit Management
SCAT Dispatch Center	Provide interactive traveler information to travelers (on-board transit vehicles, at stops/stations, using personal devices), traveler information service providers, media, and other transit organizations. Includes routes, schedules, transfer options, fares, real-time schedule adherence, current incidents, weather conditions, yellow pages, and special events.		Transit Center Information Services	Transit Management
SCAT Dispatch Center	Generate requests for transit priority on routes and at certain intersections. Coordinate schedules with other agencies and modes, including transit transfer cluster and transfer point information.		Transit Center Multi-Modal Coordination	Transit Management
SCAT Dispatch Center	Management of demand response transit services, including paratransit. Planning and scheduling of these services. Supports automated vehicle dispatch and automatically updates customer service operator systems.		Transit Center Paratransit Operations	Transit Management
SCAT Dispatch Center	Monitor transit vehicle operator or traveler activated alarms; authenticate transit vehicle operators; remotely disable a transit vehicle; alert operators, travelers, and police to potential incidents identified by these security features.		Transit Center Security	Transit Management
SCAT Dispatch Center	Monitoring transit vehicle locations via interactions with on-board systems. Furnish users with real-time transit schedule information and maintain interface with digital map providers.		Transit Center Vehicle Tracking	Transit Management
SCAT Dispatch Center	Support evacuation and subsequent reentry of a population in the vicinity of a disaster or other emergency. Coordinate regional evacuation plans and resources including transit and school bus fleets.		Transit Evacuation Support	Transit Management
SCAT Dispatch Center	Collect operational and maintenance data from transit vehicles, manage vehicle service histories, automatically generate preventative maintenance schedules, and provide information to service personnel.		Transit Garage Maintenance	Transit Management
SCAT Dispatch Center	Assignment of transit vehicles and operators to routes or service areas in a fair manner while minimizing labor and overtime services, considering operator preferences, qualifications, accumulated work hours, and other information about each operator.		Transit Vehicle Operator Scheduling	Transit Management
SCAT Transit Vehicles	Collecting of data for schedule generation and adjustment on-board a transit vehicle. Supports communication between the vehicle, operator, and center.		On-board Fixed Route Schedule Management	Transit Vehicle Subsystem
SCAT Transit Vehicles	On-board systems to collect and process transit vehicle maintenance data including mileage and vehicle operating conditions for use in scheduling future vehicle maintenance.		On-board Maintenance	Transit Vehicle Subsystem

ITS Element Requirements Worksheet – Space Coast Area Transit

Element Name	Functional Area Description	Status	Functional Area	Entity Name
SCAT Transit Vehicles	On-board systems to manage paratransit and flexible-route dispatch requests, including multi-stop runs. Inputs based on the transit vehicle's type and passenger capacity.		On-board Paratransit Operations	Transit Vehicle Subsystem
SCAT Transit Vehicles	On-board systems to furnish next-stop annunciation as well as interactive travel-related information, including routes, schedules, transfer options, fares, real-time schedule adherence, current incidents, weather conditions, non-motorized transportation services, and special events.		On-board Transit Information Services	Transit Vehicle Subsystem
SCAT Transit Vehicles	On-board video/audio surveillance systems, threat sensors, and object detection sensors to enhance security and safety on-board a transit vehicles. Also includes silent alarms activated by transit user or vehicle operator, operator authentication, and remote vehicle disabling.		On-board Transit Security	Transit Vehicle Subsystem
SCAT Transit Vehicles	Support fleet management with automatic vehicle location (AVL) and automated mileage and fuel reporting and auditing.		On-board Transit Trip Monitoring	Transit Vehicle Subsystem
SCAT Website				Information Service Provider

Section 7

Stakeholders Roles and Responsibilities Worksheet

Stakeholder Role and Responsibilities Worksheet – Brevard County

Stakeholder	RR Description	RR Area Name	RR Status
Brevard County	Perform network surveillance for detection and verification of incidents on county roads, and send traffic/incident information and traffic images to county fire/EMS/sheriff agencies, the FHP, the county EOC, and local fire/EMS/police agencies.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Provide incident information to travelers via traffic information devices on county roads, and through local ISPs, Web sites, and the local media.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Receive incident information, incident response status, and resource requests from the county EOC/warning points.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Coordinate maintenance resources for incident response with county and city maintenance and construction systems.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Planned
Brevard County	Coordinate evacuation and reentry plans with the county EOC/warning points.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Provide traffic information to travelers using the county public information system, private companies, the central Florida traveler information system, and the media.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Receive AMBER Alerts and other wide area alert information from the county EOC/warning points.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Coordinate emergency plans, incident responses, and resources with the county EOC/warning points.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Provide traffic information to travelers using Brevard County DMS devices.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Planned
Brevard County	Provide traffic and road network information to local transit agencies (Sarasota County SCAT).	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Planned
Brevard County	Provide traffic information in a coordination effort to the FDOT statewide C2C information network and the central Florida TMC information network.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Planned

Stakeholder Role and Responsibilities Worksheet – Brevard County

Stakeholder	RR Description	RR Area Name	RR Status
Brevard County	Coordinate HRI signal adjustments, and provide track status information (e.g.. blockage) to rail operators and local traffic operations.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Obtain traffic images and traffic flow data from Brevard County CCTVs and field sensors, and maintain operational control of all field equipment.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Operate county and local drawbridge systems in conjunction with county signal systems.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Coordinate traffic information and traffic control with the FDOT District 5 regional transportation management center (RTMC).	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Coordinate traffic information with the City of Melbourne Traffic Operations Center (TOC).	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Operate traffic signal systems, including CCTVs, signals, and sensors, for Brevard County.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Coordinate emergency traffic signal control with the county EOC/warning points.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
Brevard County	Provide emergency signal preemption for county and local fire/EMS agencies.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Planned

Stakeholder Role and Responsibilities Worksheet – City of Melbourne

Stakeholder	RR Description	RR Area Name	RR Status
City of Melbourne	Perform network surveillance for detection and verification of incidents on city streets, and send traffic/incident information and traffic images to county fire/EMS/sheriff agencies, the FHP, the county EOC, and local fire/EMS/police agencies.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Provide incident information to travelers using traffic information devices on city streets, and through local ISPs, Web sites, and the local media.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Receive incident information, incident response status, and resource requests from the county EOC/warning point.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Coordinate maintenance resources for incident response with county and city maintenance and construction systems.	Incident Management (Traffic and Maintenance) for Central Florida Regional ITS Architecture - FDOT District 5	Planned
City of Melbourne	Coordinate evacuation and reentry plans with the county EOC/warning points.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Provide traffic information to travelers via private companies; county and city public information systems; and the media.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Receive AMBER Alerts and other wide area alert information from the county EOC/warning points.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Coordinate emergency plans, incident responses, and resources with the county EOC/warning points.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Provide traffic information to travelers using City of Melbourne DMS devices.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Planned
City of Melbourne	Provide traffic information and road network conditions to local transit operations, including SCAT.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Planned
City of Melbourne	Provide traffic information in a coordination effort to the FDOT statewide C2C information network and the southwest Florida TMC information network.	Information Dissemination for Central Florida Regional ITS Architecture - FDOT District 5	Planned

Stakeholder Role and Responsibilities Worksheet – City of Melbourne

Stakeholder	RR Description	RR Area Name	RR Status
City of Melbourne	Coordinate HRI signal adjustments, and provide track status information (e.g., blockage) to rail operators and local traffic operations.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Coordinate traffic information with the Brevard County TOC.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Operate traffic signal systems, including CCTVs, signals, and sensors, for the City of Melbourne.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Coordinate emergency traffic signal control with the county EOC/warning points.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Existing
City of Melbourne	Provide emergency signal preemption for county and local fire/EMS agencies.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Planned
City of Melbourne	Obtain traffic images and traffic flow data from CCTVs and field sensors, and maintain operational control of its own field equipment.	Traffic Signal Control for Central Florida Regional ITS Architecture - FDOT District 5	Planned

Stakeholder Role and Responsibilities Worksheet – Space Coast Area Transit

Stakeholder	RR Description	RR Area Name	RR Status
SCAT - Space Coast Area Transit	Provide operator instructions and receive schedule performance information from transit vehicles while in service.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Existing
SCAT - Space Coast Area Transit	Provide fixed-route bus service and paratransit/demand-responsive transit service for Brevard County.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Existing
SCAT - Space Coast Area Transit	Track and evaluate schedule performance on all SCAT transit vehicles.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Existing
SCAT - Space Coast Area Transit	Provide transit schedule and fare information to the central Florida traveler information system, local agency traveler information systems, and the SCAT Web site.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Existing
SCAT - Space Coast Area Transit	Receive road network conditions from regional traffic management agencies.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Provide transit security on all transit vehicles using silent alarms.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Receive work zone information and road network status from regional maintenance and construction agencies.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Coordinate multimodal connections for fixed-route transit vehicles with other regional transit agencies and multimodal service providers.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Provide transit traveler information to the SCAT Web site, local private sector traveler information services, and local agency traveler information systems, and make it available on all SCAT transit vehicles and at transit station kiosks.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Coordinate a transit security breach with local police and the county sheriff.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Provide a demand-responsive transit plan to users and travelers using local agency traveler information systems.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned
SCAT - Space Coast Area Transit	Coordinate emergency plans with county EOCs, and provide emergency transit services for evacuations, fires, and disasters, including reentry services.	Transit Management for Central Florida Regional ITS Architecture - FDOT District 5	Planned

Section 8

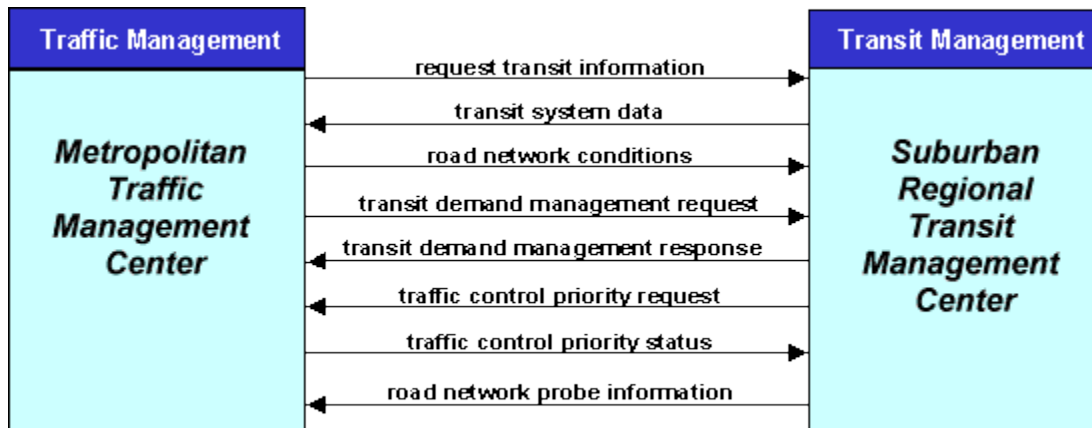

Project Planning Worksheet

Section 9

Definitions

Definitions:

Architecture Flow: Information that is exchanged between subsystems and terminators in the physical architecture of the National ITS Architecture. Architecture flows are the primary tool that is used to define interfaces in regional ITS architectures and project ITS architectures. Architecture flows and their communication requirements define the interfaces which form the basis for much of the ongoing standards work in the national ITS program. The terms "information flow" and "architecture flow" are used interchangeably.

Data Flow: Representations of data flowing between processes or between a process and a terminator in the logical architecture of the National ITS Architecture. A data flow is shown as an arrow on a data flow diagram and is defined in a data dictionary entry in the logical architecture. Data flows are aggregated together to form high-level architecture flows in the physical architecture of the National ITS Architecture.

Data Flow Diagram: The diagrams in the logical architecture of the National ITS Architecture that show the functions that are required for ITS and the information that moves between these functions.

Element: An ITS system or piece of a system named as the name used by stakeholders. Elements are the basic building blocks of regional ITS architectures and project ITS architectures.

Entity: (Subsystems and Terminators make up Entities) Entities are the persons, places, and things that make up an intelligent transportation system. In the physical architecture, an entity represents a National ITS Architecture subsystem or terminator.

Equipment Package: The building blocks of the subsystems of the physical architecture subsystems. Equipment packages group similar processes of a particular subsystem together into an implementable package. The grouping also takes into account the user services and the need to accommodate various levels of functionality. The equipment packages were used as a basis for estimating deployment costs (as part of the evaluation that was performed). Since equipment packages are both the most detailed elements of the physical architecture of the National ITS Architecture and tied to specific service packages, they provide the common link between the interface-oriented architecture definition and the deployment-oriented service packages.

Informational Flow: Information that is exchanged between subsystems and terminators in the physical architecture of the National ITS Architecture. The terms "information flow" and "architecture flow" are used interchangeably. Information flows are the primary tool that is used to define the ITS architecture interfaces. These information flows and their communication requirements define the interfaces which form the basis for much of the ongoing standards work in the national ITS program.

Inventory: The list of all ITS-related elements in a regional ITS architecture or project ITS architecture.

ITS Architecture: Defines an architecture of interrelated systems that work together to deliver transportation services. An ITS architecture defines how systems functionally operate and the interconnection of information exchanges that must take place between these systems to accomplish transportation services.

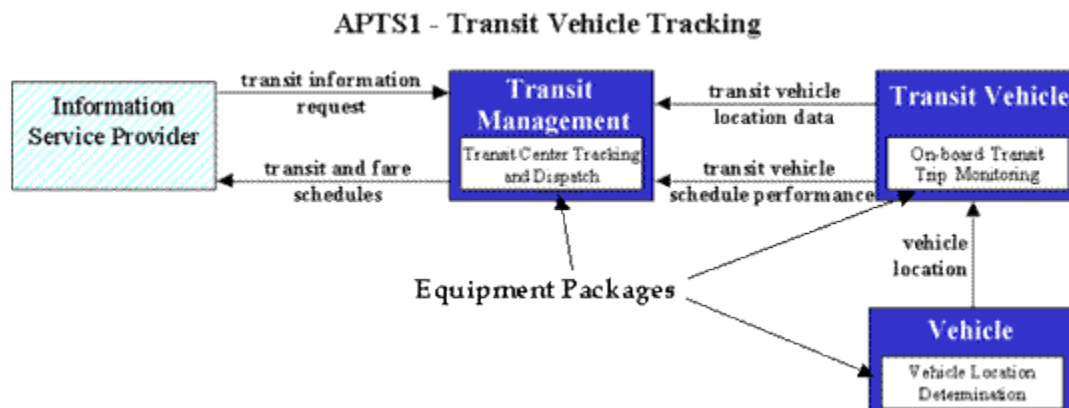

Logical Architecture: The part of the National ITS Architecture that defines what has to be done to support the ITS user services. It defines the processes that perform ITS functions and the information or data flows that are shared between these processes. The logical architecture was developed using Structured Analysis techniques and consists of data flow diagrams, process specifications, and data dictionary entries. The logical architecture has also been called an "Essential Model" because it is not technology specific, nor does it dictate a particular implementation. This implementation independence makes the logical architecture accommodating to innovation, scalable from small scale implementations to large regional systems, and supportive of widely varied system designs.

Performance Measure: Indicator of how well the transportation system is performing with regard to such measures as average speed, reliability of travel, and accident rates. Used as feedback in the decision making process.

Planning Factors: As specified in the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) legislation (in Section 5303 and Section 5304 of Title 49 of the United States Code), the nine areas which metropolitan planning organizations (MPOs) and states should consider when developing their transportation plans.

Physical Architecture: The part of the National ITS Architecture that provides agencies with a physical representation (though not a detailed design) of the important ITS interfaces and major system components. It provides a high-level structure around the processes and data flows defined in the logical architecture. The principal elements in the physical architecture are the subsystems and architecture flows that connect these subsystems and terminators into an overall structure. The physical architecture takes the processes identified in the logical architecture and assigns them to subsystems. In addition, the data flows (also from the logical architecture) are grouped together into architecture flows. These architecture flows and their communication requirements define the interfaces required between subsystems, which form the basis for much of the ongoing standards work in the ITS program.

Service/Market Package: The service packages, formerly known as market packages, provide an accessible, service-oriented perspective to the National ITS Architecture. They are tailored to fit, separately or in combination, real world transportation problems and needs. Service packages collect together one or more equipment packages that must work together to deliver a given ITS service and the architecture flows that connect them and other important external systems. In other words, they identify the pieces of the physical architecture that are required to implement a particular ITS service. Service packages are implemented through projects (or groups of projects, aka programs) and in transportation planning, are directly related to ITS strategies used to meet regional goals and objectives.

Stakeholder: A widely used term that notates a public agency, private organization or the traveling public with a vested interest, or a "stake" in one or more transportation elements within a regional ITS architecture or project ITS architecture.

Subsystem: The principle structural element of the physical architecture of the National ITS Architecture. Subsystems are individual pieces of the Intelligent Transportation System defined by the National ITS Architecture. Subsystems are grouped into four classes: Centers, Field, Vehicles, and Travelers. Example subsystems are the Traffic Management Subsystem, the Vehicle Subsystem, and the Roadway Subsystem. These correspond to the physical world: respectively traffic operations centers, automobiles, and roadside signal controllers. Due to this close correspondence between the physical world and the subsystems, the subsystem interfaces are prime candidates for standardization.

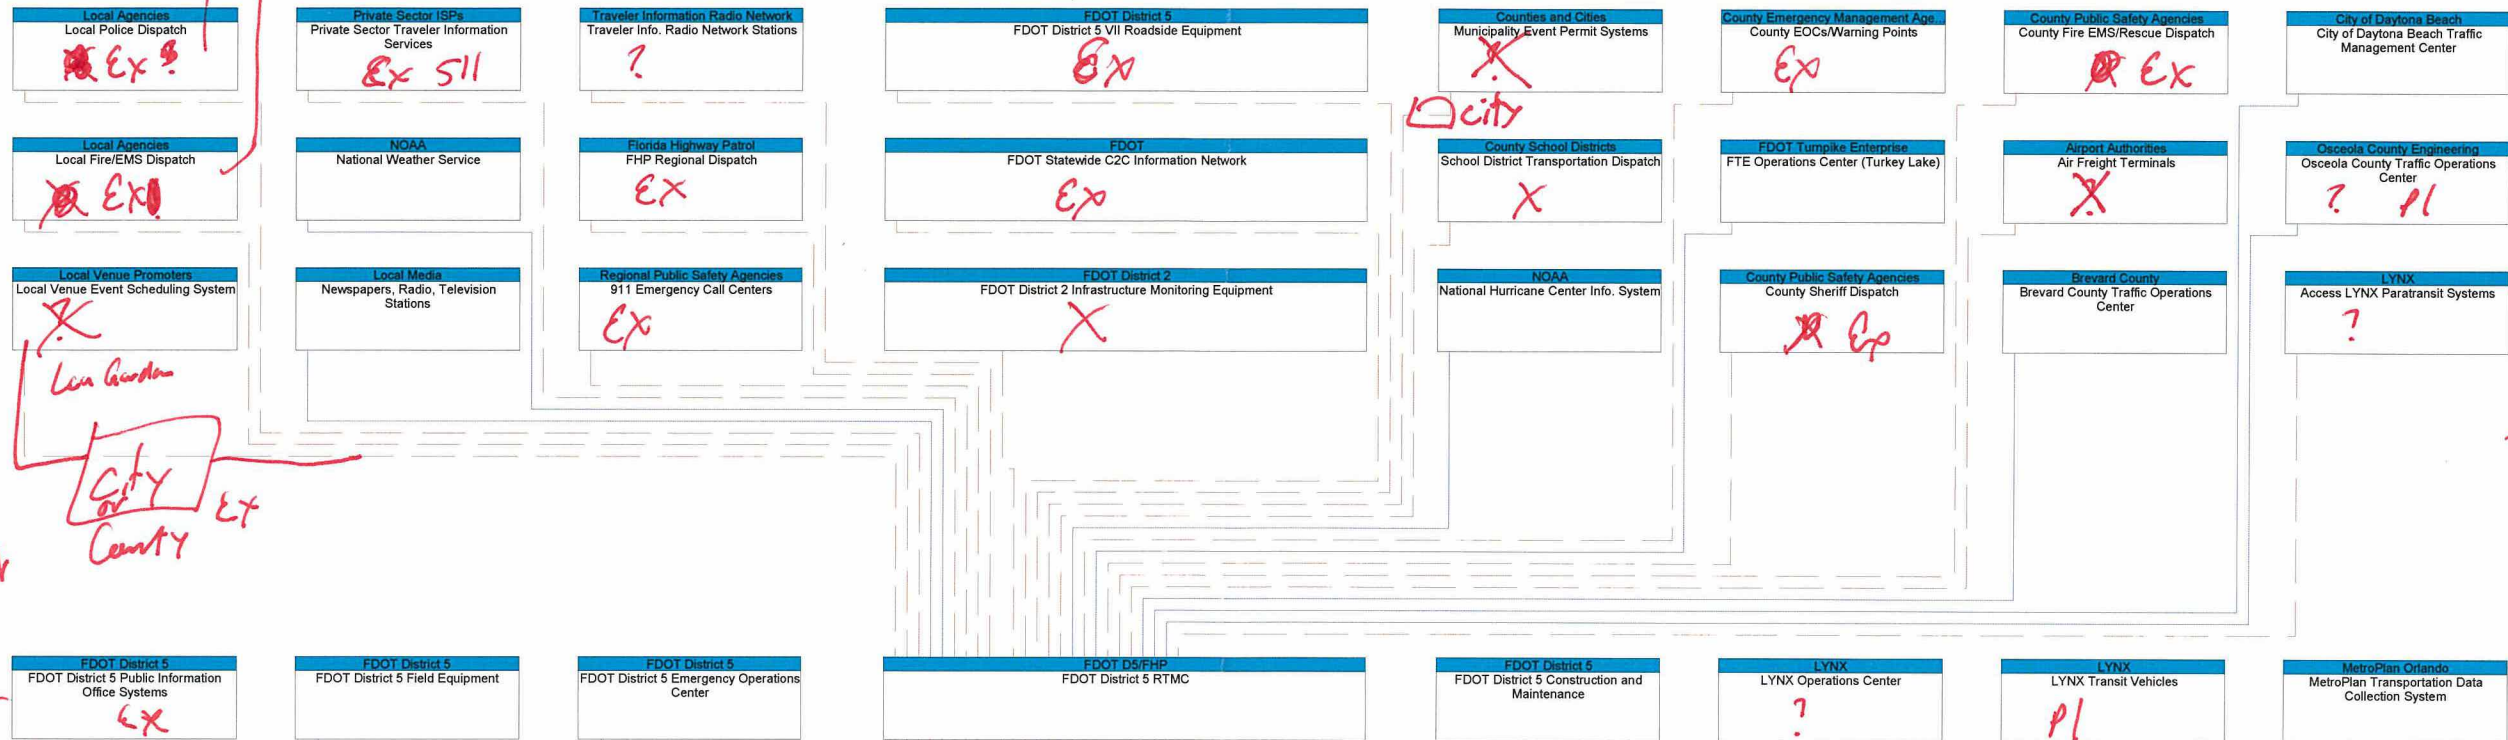

Terminators: Terminators define the boundary of an architecture. The National ITS Architecture terminators represent the people, systems, and general environment that interface to ITS. The interfaces between terminators and the subsystems and processes within the National ITS Architecture are defined, but no functional requirements are allocated to terminators. The logical architecture and physical architecture of the National ITS Architecture both contain the same set of terminators.

Florida Regional Architecture

This Turbo Architecture database contains the ITS elements, interfaces and operational concepts for the State of Florida. This Florida Statewide ITS architecture is actually 8 regional ITS architectures harmonized into a single Turbo Architecture database. The regional ITS architectures are for FDOT District 1, FDOT District 2, FDOT District 3, FDOT Districts 4 and 6, FDOT District 5, FDOT District 7, FDOT Turnpike Enterprise, and a common Florida Statewide Services Architecture.
